

ZKBio WDMS

Powerful Web-based Data Master System Middleware

ZKBio WDMS is a Web-based Data Master System, which is a middleware.

As a middleware, it allows you to deploy on servers and databases for devices and transactions management.

Administrators can access ZKBio WDMS anywhere on a browser or a third-party software by API to handle thousands of devices.

The Mask & Temperature Detection (MTD) module records data about body temperature and mask detection taken for each employee entering the controlled area.

The system automatically imports personnel information through the user's simple configuration.

Features

Employee Information
Export/Import with a USB
