Without the prior written consent of ZKTeco, no portion of this manual can be copied or forwarded in any way or form. All parts of this manual belong to ZKTeco and its subsidiaries (hereinafter the "Company" or "ZKTeco").

Trademark

ZKTECO is a registered trademark of ZKTeco. Other trademarks involved in this manual are owned by their respective owners.

Disclaimer

This manual contains information on the operation and maintenance of the ZKTeco equipment. The copyright in all the documents, drawings, etc. in relation to the ZKTeco supplied equipment vests in and is the property of ZKTeco. The contents hereof should not be used or shared by the receiver with any third party without express written permission of ZKTeco.

The contents of this manual must be read as a whole before starting the operation and maintenance of the supplied equipment. If any of the content(s) of the manual seems unclear or incomplete, please contact ZKTeco before starting the operation and maintenance of the said equipment.

It is an essential pre-requisite for the satisfactory operation and maintenance that the operating and maintenance personnel are fully familiar with the design and that the said personnel have received thorough training in operating and maintaining the machine/unit/equipment. It is further essential for the safe operation of the machine/unit/equipment that personnel has read, understood and followed the safety instructions contained in the manual.

In case of any conflict between terms and conditions of this manual and the contract specifications, drawings, instruction sheets or any other contract-related documents, the contract conditions/documents shall prevail. The contract specific conditions/documents shall apply in priority.

ZKTeco offers no warranty, guarantee or representation regarding the completeness of any information contained in this manual or any of the amendments made thereto. ZKTeco does not extend the warranty of any kind, including, without limitation, any warranty of design, merchantability or fitness for a particular purpose.

ZKTeco does not assume responsibility for any errors or omissions in the information or documents which are referenced by or linked to this manual. The entire risk as to the results and performance obtained from using the information is assumed by the user.

ZKTeco in no event shall be liable to the user or any third party for any incidental, consequential, indirect, special, or exemplary damages, including, without limitation, loss of business, loss of profits, business interruption, loss of business information or any pecuniary loss, arising out of, in connection with, or relating to the use of the information contained in or referenced by this manual, even if ZKTeco has been advised of the possibility of such damages.

This manual and the information contained therein may include technical, other inaccuracies or typographical errors. ZKTeco periodically changes the information herein which will be incorporated into new additions/amendments to the manual. ZKTeco reserves the right to add, delete, amend or modify the information contained in the manual from time to time in the form of circulars, letters, notes, etc. for better operation and safety of the machine/unit/equipment. The said additions or amendments are meant for improvement /better operations of the machine/unit/equipment and such amendments shall not give any right to claim any compensation or damages under any circumstances.

ZKTeco shall in no way be responsible (i) in case the machine/unit/equipment malfunctions due to any non-compliance of the instructions contained in this manual (ii) in case of operation of the machine/unit/equipment beyond the rate limits (iii) in case of operation of the machine and equipment in conditions different from the prescribed conditions of the manual.

The product will be updated from time to time without prior notice. The latest operation procedures and relevant documents are available on <u>http://www.zkteco.com</u>.

If there is any issue related to the product, please contact us.

About the Company

ZKTeco is one of the world's largest manufacturer of RFID and Biometric (Fingerprint, Facial, Finger-vein) readers. Product offerings include Access Control readers and panels, Near & Far-range Facial Recognition Cameras, Elevator/floor access controllers, Turnstiles, License Plate Recognition (LPR) gate controllers and Consumer products including battery-operated fingerprint and face-reader Door Locks. Our security solutions are multi-lingual and localized in over 18 different languages. At the ZKTeco state-of-the-art 700,000 square foot ISO9001-certified manufacturing facility, we control manufacturing, product design, component assembly, and logistics/shipping, all under one roof.

The founders of ZKTeco have been determined for independent research and development of biometric verification procedures and the productization of biometric verification SDK, which was initially widely applied in PC security and identity authentication fields. With the continuous enhancement of the development and plenty of market applications, the team has gradually constructed an identity authentication ecosystem and smart security ecosystem, which are based on biometric verification techniques. With years of experience in the industrialization of biometric verifications, ZKTeco was officially established in 2007 and now has been one of the globally leading enterprises in the biometric verification industry owning various patents and being selected as the National High-tech Enterprise for 6 consecutive years. Its products are protected by intellectual property rights.

About the Manual

This manual introduces the operations of SpeedFace-V5L/SpeedFace-V5L[TD]/SpeedFace-V5L[TI].

All figures displayed are for illustration purposes only. Figures in this manual may not be exactly consistent with the actual products.

Features and parameters with \star are not available in all devices.

Document Conventions

Conventions used in this manual are listed below:

GUI Conventions

For Software			
Convention	Description		
Bold font	Used to identify software interface names e.g., OK , Confirm , Cancel .		
>	Multi-level menus are separated by these brackets. For example, File > Create > Folder.		
	For Device		
Convention	Description		
<>	Button or key names for devices. For example, press <ok>.</ok>		
[]	Window names, menu items, data table, and field names are inside square brackets. For example, pop up the [New User] window.		
1	Multi-level menus are separated by forwarding slashes. For example, [File/Create/Folder].		

Symbols

Convention	Description		
	This represents a note that needs to pay more attention to.		
?	The general information which helps in performing the operations faster.		
*	The information which is significant.		
۷	Care taken to avoid danger or mistakes.		
	The statement or event that warns of something or that serves as a cautionary example.

Data Security Statement

ZKTeco, as a smart product supplier, may also need to know and collect some of your personal information in order to better assist you in using ZKTeco's goods and services, and will treat your privacy carefully by developing a Privacy Policy.

Please read and understand completely all the privacy protection policy regulations and key points that appear on the device before using ZKTeco products.

As a product user, you must comply with applicable laws and regulations related to personal data protection when collecting, storing, and using personal data, including but not limited to taking protective measures for personal data, such as performing reasonable rights management for devices, strengthening the physical security of device application scenarios, and so on.

Safety Measures

The below instructions intend to ensure that the user can use the product correctly to avoid danger or property loss. The following precautions are to keep users safe and prevent any damage. Please read carefully before installation.

A Noncompliance with instructions could lead to product damage or physical injury (may even cause death).

- 1. Read, follow, and retain instructions All safety and operational instructions must be properly read and followed before bringing the device into service.
- 2. Do not ignore warnings Adhere to all warnings on the unit and in the operating instructions.
- **3. Accessories** Use only manufacturer-recommended or product-sold accessories. Please do not use any other components other than manufacturer suggested materials.
- **4. Precautions for the installation** Do not place this device on an unstable stand or frame. It may fall and cause serious injury to persons and damage to the device.
- 5. Service Do not try to service this unit yourself. Opening or removing covers may expose you to hazardous voltages or other hazards.
- **6. Damage requiring service** Disconnect the system from the Mains AC or DC power source and refer service personnel under the following conditions:
 - When cord or connection control is affected.
 - When the liquid spilled, or an item dropped into the system.
 - If exposed to water or due to inclement weather (rain, snow, and more.
 - If the system is not operating normally, under operating instructions.

Just change controls defined in operating instructions. Improper adjustment of the controls may result in damage and involve a qualified technician to return the device to normal operation.

And do not connect multiple devices to one power adapter as adapter overload can cause over-

heat or fire hazard.

- 7. **Replacement parts** When replacement parts are needed, service technicians must only use replacement parts provided by the supplier. Unauthorized substitutes can result in a burn, shock, or other hazards.
- 8. **Safety check** On completion of service or repair work on the unit, ask the service technician to perform safety checks to ensure proper operation of the device.
- **9. Power sources** Operate the system only from the label's power source form. If the sort of power supply to use is unclear, call your dealer.
- **10. Lightning** Can install external lightning conductors to protect against electrical storms. It stops power-ups from destroying the system.

Recommended installing the devices in areas with limited access.

Electrical Safety

- Before connecting an external cable to the device, complete grounding properly, and set up surge protection; otherwise, static electricity will damage the mainboard.
- Make sure that the power has been disconnected before you wire, install, or dismantle the device.
- Ensure that the signal connected to the device is a weak-current (switch) signal; otherwise, components of the device will get damaged.
- Ensure that the standard voltage applicable in your country or region is applied. If you are not sure about the endorsed standard voltage, please consult your local electric power company. Power mismatch may cause a short circuit or device damage.
- In the case of power supply damage, return the device to the professional technical personnel or your dealer for handling.
- To avoid interference, keep the device far from high electromagnetic radiation devices, such as generators (including electric generators), radios, televisions, (especially CRT) monitors, or speakers.

Operation Safety

- If smoke, odour, or noise rise from the device, turn off the power at once and unplug the power cable, and then please contact the service centre.
- Transportation and other unpredictable causes may damage the device hardware. Check whether the device has any intense damage before installation.
- If the device has major defects that you cannot solve, contact your dealer as soon as possible.
- Dust, moisture, and abrupt temperature changes can affect the device's service life. You are advised not to keep the device under such conditions.
- Do not keep the device in a place that vibrates. Handle the device with care. Do not place heavy objects on top of the device.

- Do not apply rosin, alcohol, benzene, pesticides, and other volatile substances that may damage the device enclosure. Clean the device accessories with a piece of soft cloth or a small amount of cleaning agent.
- If you have any technical questions regarding usage, contact certified or experienced technical personnel.

Note:

- Make sure whether the positive polarity and negative polarity of the DC 12V power supply is connected correctly. A reverse connection may damage the device. It is not advisable to connect the AC 24V power supply to the DC 12V input port.
- Make sure to connect the wires following the positive polarity and negative polarity shown on the device's nameplate.
- The warranty service does not cover accidental damage, damage caused by mis-operation, and damage due to independent installation or repair of the product by the user.

1 <u>Overview</u>

SpeedFace-V5L Series using intelligent engineering facial recognition algorithms and the latest computer vision technology. It supports Fingerprint, facial verification with large capacity and speedy recognition, also the facial camera support QR code with Mobile APP, as well as improves security performance in all aspects.

SpeedFace-V5L Series adopts touchless recognition technology and masked individual identification which eliminates hygiene concerns effectively. It is also equipped with ultimate antispoofing algorithm for facial recognition against almost all types of fake photos and videos attack. Besides, its facial camera supports QR code, PDF417, Data Matrix, MicroPDF417, Aztec, and so on, with ZKBioAccess IVS Mobile APP support Dynamic QR code for T&A/A&C.

The TD/TI Version with mask detection help reduce the spread of germs and help prevent infections straightly at each access point of any premises and public areas such as hospitals, factories, schools, commercial buildings, stations during the recent global public health issue with its masked individual identification function during facial verification.

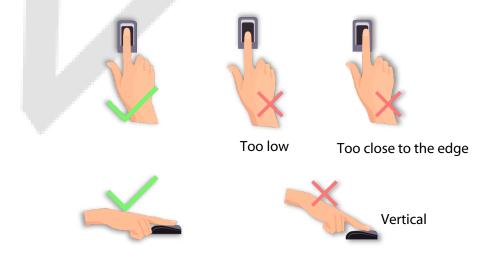

SpeedFace-V5L Series support video intercom Both via mobile app ZSmart and via PC software ZKBioTalk, also they are integrated ONVIF Video protocol, so that they can connect to Onvif NVR to Video surveillance and recording.

2 Instruction for Use

Before getting into the device features and functions, it is recommended to be familiar with the below fundamentals.

2.1 Finger Positioning

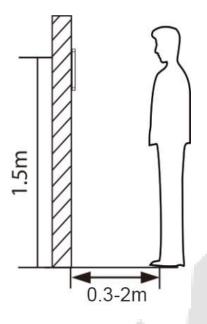

Recommended fingers: Index, middle, or ring fingers; avoid using the thumb or pinky, as they are difficult to accurately press onto the fingerprint reader.

Note: Please use the correct method when pressing your fingers onto the fingerprint reader for registration and identification. Our company will assume no liability for recognition issues that may result from incorrect usage of the product. We reserve the right of final interpretation and modification concerning this point.

2.2 Standing Position, Facial Expression and Standing Posture

The Recommended Distance

The distance between the device and a user whose height is in a range of 1.55m to 1.85m is recommended to be 0.3 to 2.5m. Users may slightly move forward or backward to improve the character of facial images captured.

Recommended Standing Posture and Facial Expression

Note: Please keep your facial expression and standing posture natural while enrolment or verification.

2.3 Face Registration

Try to keep the face in the centre of the screen during registration. Please face the camera and stay still during face registration. The screen looks like this:

Correct Face Registration and Authentication Method

Recommendation for Registering a Face

- When registering a face, maintain a distance of 40cm to 80cm between the device and the face.
- Be careful to keep your facial expression natural and not to change. (smiling face, drawn face, wink, etc.)
- If you do not follow the instructions on the screen, the face registration may take longer or may fail.
- Be careful not to cover the eyes or eyebrows.
- Do not wear hats, masks, sunglasses or eyeglasses.
- Be careful not to display two faces on the screen. Register one person at a time.
- It is recommended for a user wearing glasses to register both faces with and without glasses.

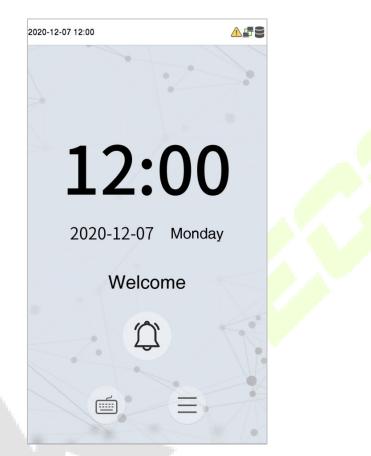

Recommendation for Authenticating a Face

- Ensure that the face appears inside the guideline displayed on the screen of the device.
- Sometimes, authentication may fail due to the change in the wearing glasses then the one used while registration. In such a case, you may require authenticating your face with the previously worn glasses.
 If your face was registered without glasses, you should authenticate your face without glasses further.

If a part of the face is covered with a hat, a mask, an eye patch, or sunglasses, authentication may fail.
 Do not cover the face, allow the device to recognize both the eyebrows and the face.

2.4 Standby Interface

After connecting the power supply, the following standby interface is displayed:

- Tap 📟 to enter the User ID input interface.
- When there is no Super Administrator set in the device, tap \equiv to go to the menu.
- After adding a Super Administrator on the device, it requires the Super Administrator's verification before opening the menu functions.

Note: For the security of the device, it is recommended to register a super administrator the first time you use the device.

• The punch state options can also be displayed and used directly on the standby interface. Tap anywhere on the screen apart from the icons, and six shortcut keys appears on the screen, as shown in the figure below:

2020-12-07 12:11	A ,	78
		9.
Check-In	Check-Out	
Break-Out	Break-In	
Overtime-In	Overtime-Out	
		5
1	Ĵ	•
Í	=	
		•

• Press the corresponding punch state key to select your current punch state, which is displayed in green. Please refer to "<u>Shortcut Key Mappings</u>" for the specific operation method.

Note: The punch state options are off by default and need to select other mode options in the "<u>Punch</u> <u>States Options</u>" to get the punch state options on the standby screen.

2.5 Virtual Keyboard

5	First Name	
М		
	ice iceberg	ESC

as	d f g h j	k l
☆z	x c v b n	m
123 EN/中		ОК

Note: The device supports the input in Chinese language, English language, numbers, and symbols.

- Tap **En** to switch to the English keyboard.
- Press **123** to switch to the numeric and symbolic keyboard.
- Tap **ABC** to return to the alphabetic keyboard.
- Tap the input box, a virtual keyboard appears.
- Tap **ESC** to exit the virtual keyboard.

2.6 Verification Mode

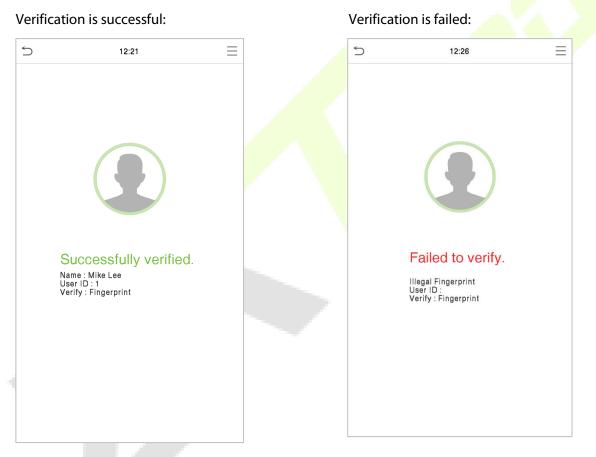

2.6.1 Fingerprint Verification

• 1: N Fingerprint Verification Mode

Compares the fingerprint that is being pressed onto the fingerprint reader with all of the fingerprint data that is stored in the device.

The device enters the fingerprint authentication mode when a user presses his/her finger onto the fingerprint scanner.

Please follow the correct way to place your finger onto the sensor. For details, please refer to section Finger Positioning.

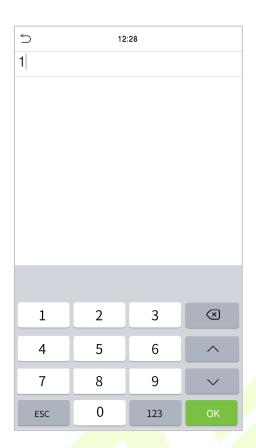

1: 1 Fingerprint Verification Mode

Compares the fingerprint that is being pressed onto the fingerprint reader with the fingerprints that are linked to User ID input via the virtual keyboard.

Users may verify their identities with 1:1 verification mode when they cannot gain access with 1: N authentication method.

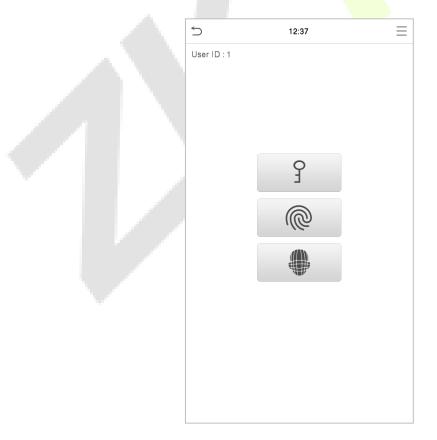

Click the 💼 button on the main screen to enter 1:1 fingerprint verification mode.

Input the user ID and press **OK**.

If the user has registered face and password in addition to his/her fingerprints and the verification method is set to Password/Fingerprint/Face verification, the following screen will appear. Select the fingerprint

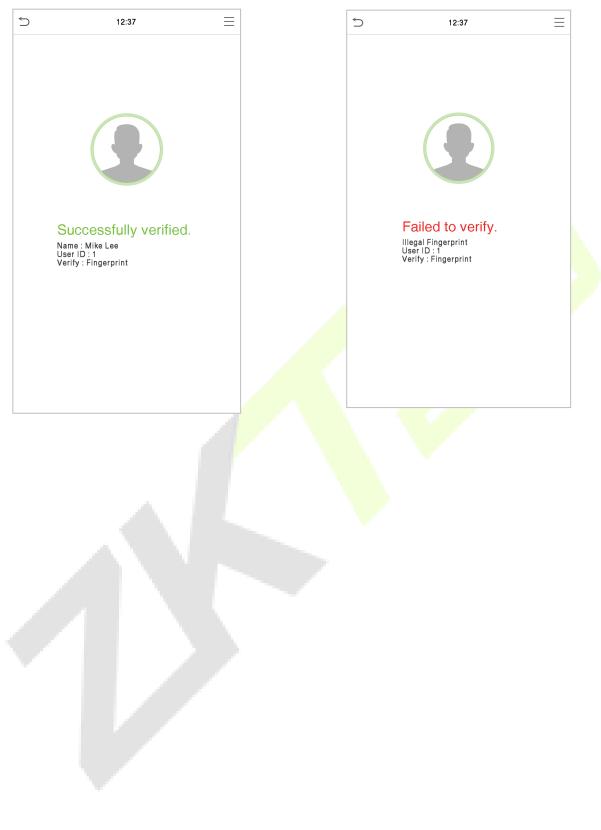

icon to @ enter fingerprint verification mode.

Press the fingerprint to verify.

Verification is successful:

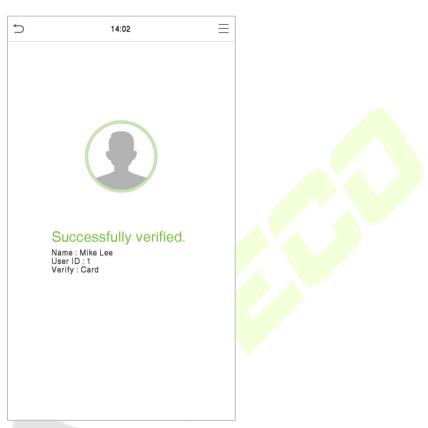

Verification is failed:

2.6.2 Card Verification

1:N Card Verification

It compares the acquired card information with all card data registered in the device. The following is the pop-up prompt box of comparison results.

1:1 Card Verification

Compares the card that is being put onto the card reader with the card data that related to the entered user ID.

Press in on the main interface and enter the 1:1 card verification mode.

Enter the user ID and click **OK**.

5	12	:28	
1			
1	2	3	$\overline{\mathbf{x}}$
4	5	6	^
7	8	9	\sim
ESC	0	123	ОК

If an employee registers a fingerprint in addition to the card, the following screen will appear. Select the

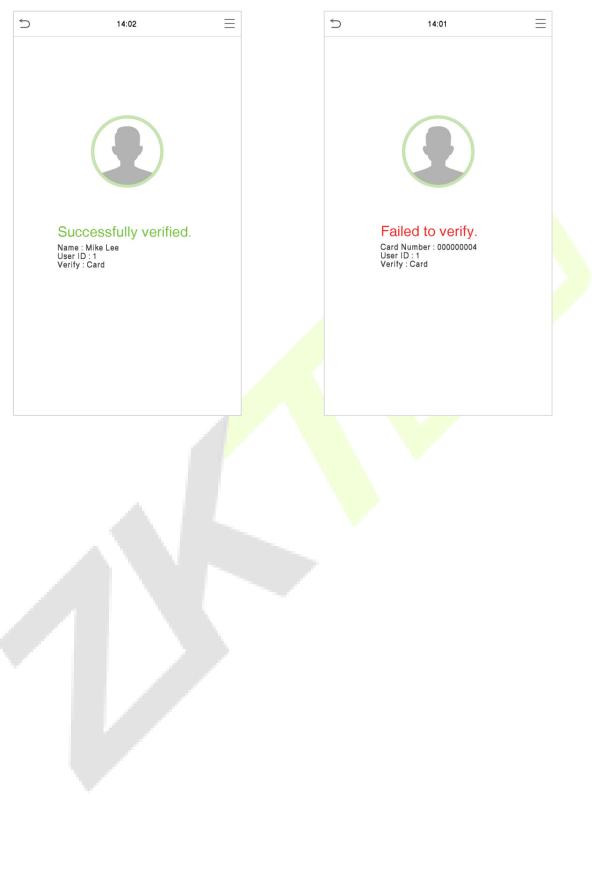

icon to enter card verification mode.

5	11:48	\equiv
User ID : 1		
	(C)	
	_	

Following are the display screen after putting a correct card and a wrong card respectively.

Verification is successful:

Verification is failed:

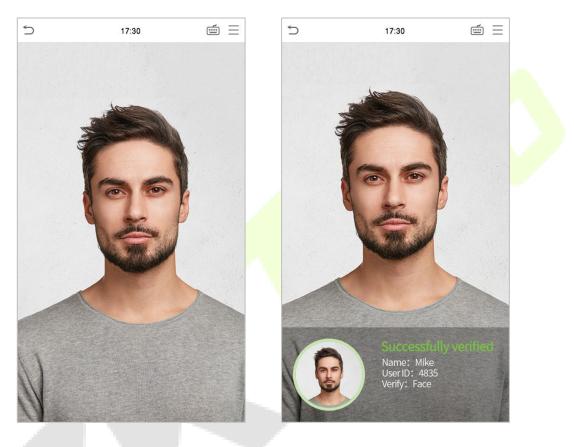

2.6.3 Facial Verification

1:N Facial Verification

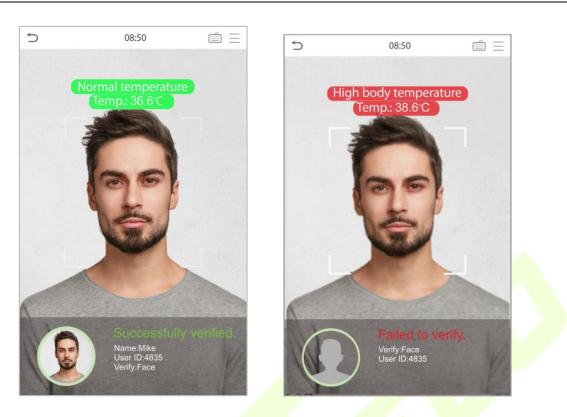

Conventional Verification

In this verification mode, the device compares the collected facial images with all face data registered in the device. The following is the pop-up prompt of a successful comparison result.

Enable Temperature Screening with Infrared

When the user enables the **Enable temperature screening with infrared** function, during user verification, in addition to the conventional verification method, the user's face must be aligned with the temperature measurement area to measure the body temperature before the verification can be conducted. The following are the popups of the comparison result prompt interface. (Note: This function is only applicable to products with temperature measurement module.)

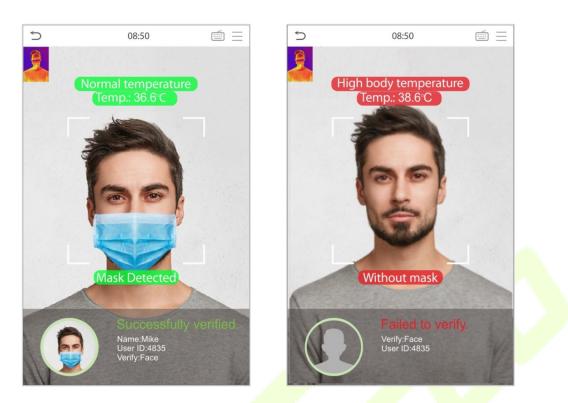

Enable Mask Detection

When the user enables the **Enable mask detection** function, the device will identify whether the user is wearing a mask or not while verification. The following are the popups of the comparison result prompt interface. (Note: This function is only applicable to products with temperature measurement module.)

Display Thermodynamics Figure

When the user enables the **Display Thermodynamics Figure** function, the thermal image of the person is displayed in the upper left corner of the device, while verification. As shown in the images below:

1:1 Facial Verification

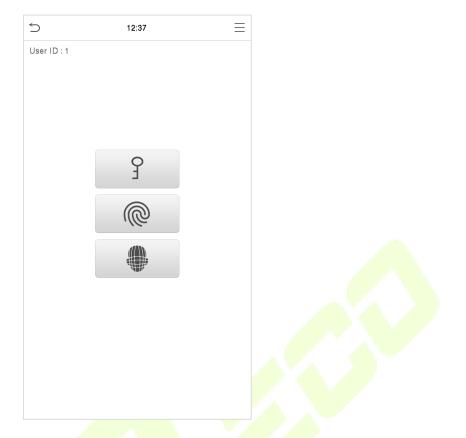

Compare the face captured by the camera with the facial template related to the entered user ID.

Press 🗐 on the main interface and enter the 1:1 facial verification mode.

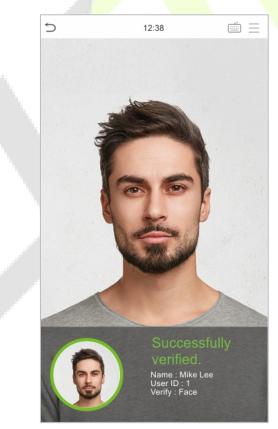

Enter the user ID and click **OK**.

5	12	28	
1			
1	2	3	×
4	5	6	^
7	8	9	\sim
ESC	0	123	ОК

If an employee registers a fingerprint and password in addition to the face, the following screen will appear. Select the icon to enter face verification mode.

After successful verification, the prompt box displays "**Successfully Verified**", as shown below:

If the verification is failed, it prompts "Please adjust your position!".

2.6.4 Password Verification

The device compares the entered password with the registered password of the given User ID.

Tap the button on the main screen to enter the 1:1 password verification mode. Then, input the user ID and press **OK**.

If an employee registers fingerprint and face in addition to password, the following screen will appear.

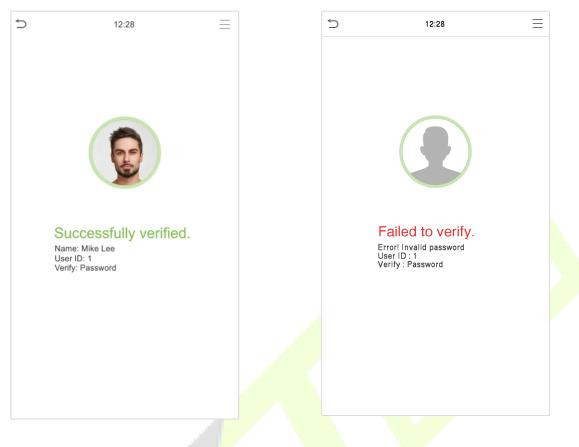

Select the $\frac{9}{2}$ icon to enter password verification mode.

Following are the display screen after entering a correct password and a wrong password respectively.

Verification is successful:

Verification is failed:

2.6.5 Combined Verification

To increase security, this device offers the option of using multiple forms of verification methods.

5	Verification Mode
ullet	Password/Fingerprint/Face
0	Fingerprint only
0	User ID only
0	Password
0	User ID+Fingerprint
0	Fingerprint+Password
0	User ID+Fingerprint+Password
0	Face only
0	Face+Fingerprint
0	Face+Password
0	Face+Fingerprint+Password

Procedure to Set for Combined Verification Mode

- Combined verification requires personnel to register all the different verification methods. Otherwise, employees may not be able to successfully verify through the combined verification process.
- For instance, when an employee has registered only the face data, but the Device verification mode is set as "Face + Password", the employee will not be able to complete the verification process successfully.
- This is because the Device compares the scanned face template of the person with registered verification template (both the Face and the Password) previously stored to that Personnel ID in the Device.

But as the employee has registered only the Face but not the Password, the verification will not get completed and the Device displays "**Verification Failed**".

Note:

- "/" means "**or**", and "+" means "**and**".
- You must register the required verification information before using the combination verification mode, otherwise the verification may fail. For example, if a user uses Face Registration but the verification mode is Face + Password, this user will never pass verification.

3 Main Menu

Press \equiv on the initial interface to enter the main menu, as shown below:

Function Description

Menu	Descriptions		
User Mgt.	To Add, Edit, View, and Delete information of a User.		
User Role	To set the permission scope of the custom role and enroller for the users, that is, the rights to operate the system.		
сомм.	To set the relevant parameters of Ne <mark>twork,</mark> Serial Comm., PC Connection, Wireless Network, Cloud Server, Wiegand and Network Diagnosis.		
System	To set parameters related to the system, including Date & Time, Access Logs Setting, Face, card, password and Fingerprint parameters, Video Intercom parameters, security settings and resetting to factory settings.		
Personalize	To customize settings of User Interface, Voice, Bell Schedules, Punch State Options and Shortcut Key Mappings settings.		
Data Mgt.	To delete all relevant data in the device.		
Access Control	To set the parameters of the lock and the relevant access control device including options like Time schedule, Holiday Settings, Combine verification, Anti-passback Setup, and Duress Option Settings.		
Attendance Search	To query the specified Event logs, check Attendance Photos and Blocklist attendance photos.		
Autotest	To automatically test whether each module functions properly, including the LCD Screen, Audio, Microphone, Fingerprint sensor, Camera, and Real-Time Clock.		
System Info	To view Data Capacity , Device and Firmware information and Privacy Policy of the device.		

Note: When users use the product for the first time, they should operate it after setting administrator privileges. Tap **User Mgt.** to add an administrator or edit user permissions as a super administrator. If the

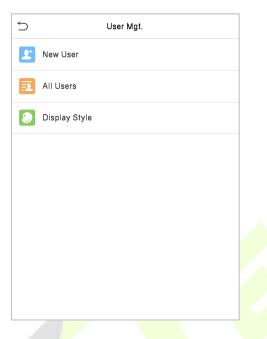

product does not have an administrator setting, the system will show an administrator setting command prompt every time you enter the device menu.

ОК		

4 User Management

4.1 User Registration

Tap **User Mgt.** on the main menu.

4.1.1 Register a User ID and Name

Tap **New User** and enter the **User ID** and **Name**.

5	New User	
User ID		3
Name		
User Role		Normal User
Palm		0
Fingerprint		0
Face		0
Card Number		
Password		
Access Control Role		

Note:

- A name can take up to 17 characters.
- The user ID may contain 1-9 digits by default.
- You can modify your ID during the initial registration but not after registration.
- If a message "**Duplicated!**" pops up, you must choose another ID as the entered User ID already exists.

4.1.2 Setting the User Role

There are two types of user accounts: the **Normal User** and the **Super Admin**. If there is already a registered administrator, the normal users have no rights to manage the system and may only access authentication verifications. The administrator owns all management privileges. If a custom role is set, you can also select **User Defined Role** permissions for the user.

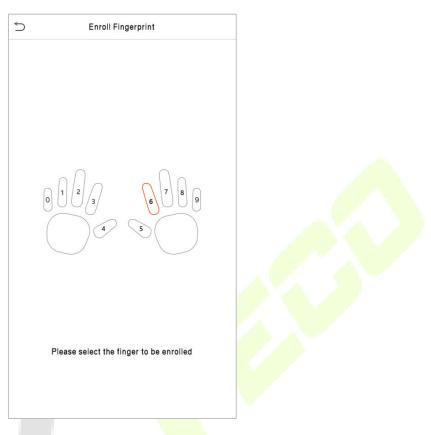

Click **User Role** to select Normal User or Super Admin.

-	5	User Role	
		Normal User	
C)	Super Admin	

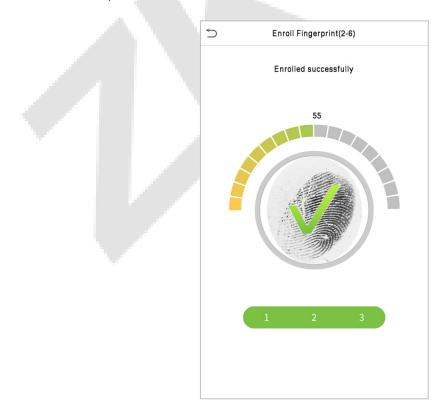

Note: If the selected user role is the Super Admin, the user must pass the identity authentication to access the main menu. The authentication is based on the authentication method(s) that the super administrator has registered. Please refer to "<u>Verification Mode</u>".

4.1.3 Register Fingerprint

Click **Fingerprint** to enter the fingerprint registration page. Select the finger to be enrolled.

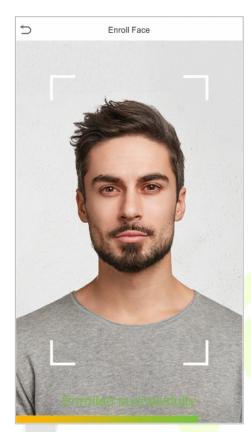

Press the same finger on the fingerprint reader three times. Green indicates that the fingerprint was enrolled successfully.

4.1.4 Register Face

Click **Face** to enter the face registration page. Please face the camera and stay still during face registration. The registration interface is as follows:

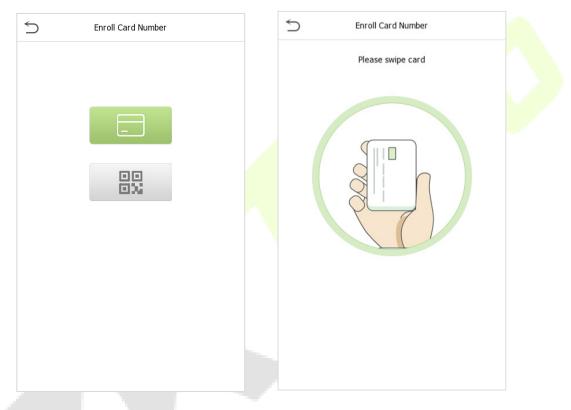

4.1.5 Register Card Number

Enroll Card

Tap **Card** in the **New User** interface to enter the card registration page.

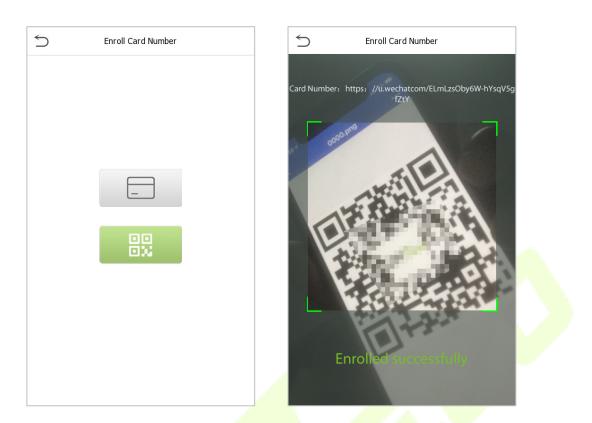

- On the Card interface, swiping card underneath the card reading area. The card registration will be successful.
- If the card is registered already then the "**Duplicate Card**" message shows up. The registration interface is as follows:

Enroll Card QR Code

Tap **Card** in the **New User** interface to enter the card registration page.

- On the Card interface, show the QR code in front of the camera. The QR code registration will be successful.
- If the QR code is registered already then the "Error! Card already enrolled." message shows up. The registration interface is as follows:

4.1.6 Register Password

Tap **Password** to enter the password registration page. Enter a password and re-enter it. Tap **OK**. If the two entered passwords are different, the prompt "**Password not match**!" will appear.

Note: The password may contain one to eight digits by default.

4.1.7 Register User Photo

When a user registered with a photo passes the authentication, the registered photo will be displayed.

Click **User Photo**, click the camera icon to take a photo. The system will return to the **New User** interface after taking a photo.

Note: While registering a face, the system will automatically capture a picture as the user photo. If you do not want to register a user photo, the system will automatically set the picture captured as the default photo.

4.1.8 Access Control Role

User access control sets the door unlocking rights of each person, including the group and the time period that the user belongs to.

Click **Access Control Role** > **Access Group**, assign the registered users to different groups for better management. New users belong to Group 1 by default and can be reassigned to other groups. The device supports up to 99 access control groups.

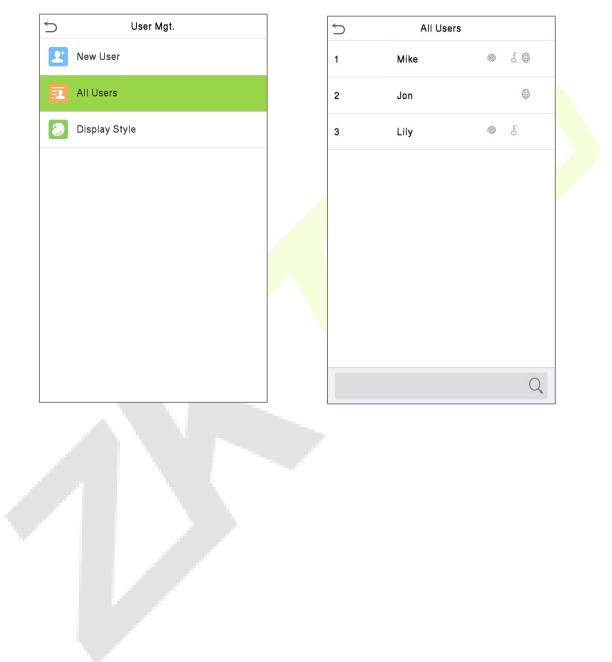

Click **Time Period**, select the time period to use.

	I
Access Group	Disabled
Time Period	
Duress Fingerprint	1

4.2 Search User

On the Main Menu, tap User Mgt., and then tap All Users to search a User.

On the **All Users** interface, tap on the search bar on the user's list to enter the required retrieval keyword (where the keyword may be the user ID, surname, or full name) and the system will search for the related user information.

4.3 Edit User

On the **All Users** interface, tap on the required user from the list and tap **Edit** to edit the user information.

5

Edit

Delete

Note: The process of editing the user information is the same as adding a new user, except that the User ID cannot be modified when editing a user. The process in detail refers to "User Registration".

Deleting User 4.4

On the All Users interface, tap on the required user from the list and tap Delete to delete the user or specific user information from the device. On the **Delete** interface, tap on the required operation and then tap **OK** to confirm the deletion.

Delete Operations

Delete User: Deletes all the user information (deletes the selected User as a whole) from the Device.

Delete Face Only: Deletes the Face information of the selected user.

Delete Password Only: Deletes the password information of the selected user.

Delete Fingerprint Only: Deletes the Fingerprint information of the selected user.

Note: If you select Delete User, all information of the user will be deleted.

User : 1 Mike Lee	5	Edit : 2
	User ID	2
	Name	
	User Role	Normal User
	Palm	1
	Fingerprint	1
	Face	1
	Card Number	
	Password	
	Access Control Role	

4.5 Display Style

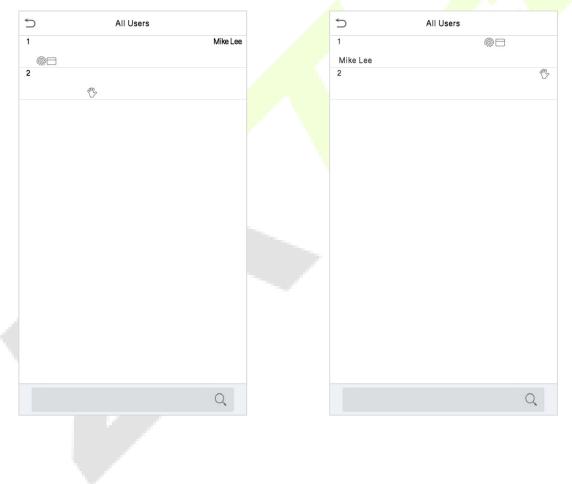

Tap on **User Mgt.** > **Display Style** to choose the style of **All Users** interface's list.

Mixed Line:

Different display styles are shown as below:

5 <u>User Role</u>

If you need to assign some specific permissions to certain users, you may edit the "User Defined Role" under the **User Role** menu.

You may set the permission scope of the custom role (up to 3 roles) and enroller, that is, the permission scope of the operation menu.

Click **User Role** on the main menu interface.

On the **User Defined Role** interface, toggle **Enable Defined Role** to enable or disable the user-defined role.

5	User Defined R	ole 1
Enable Defi	ned Role	
Name		User Defined Role 1
Define User	Role	

Tap on **Name** and enter the custom name of the role.

- 14						
	5	User Role		5	SuperAdmin	
1	2	User Defined Role 1		Enable Defin	ed Role	
	2	User Defined Role 2		Name		SuperAdmin-1
	2	User Defined Role 3				
	\$	Enroller		Define User	Role	

Then, tap on **Define User Role** and select the required privileges to assign to the new role, and then tap on the **Return** button.

During privilege assignment, the **Main Menu** function names will be displayed on the left and its submenus will be listed on its right.

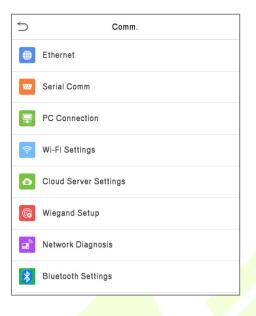

First, tap on the required **Main Menu** functions, and then select its required sub-menus from the list which the user can access.

Supe	rAdmin		5	User Role	
User Mgt.	✓ New User		0	Normal User	
Comm.	✓ All Users			SuperAdmin-1	
✓ System	V Display Style		0	Super Admin	
Personalize

✓ Print					
Autotest	_				
System Info					

Note: If the User Role is enabled for the device, tap on **User Mgt.** > **New User** > **User Role** to assign the created roles to the required users. But if there is no super administrator registered in the device, then the device will prompt "**Please enroll super admin first!**" when enabling the User Role function.

6 <u>Communication Settings</u>

Tap **COMM.** on the **Main Menu** to set the Ethernet PC connection, Cloud Server setting, Wiegand and Network Diagnosis.

6.1 Network Settings

When the device needs to communicate with a PC over the Ethernet, you need to configure network settings and ensure that the device and the PC connect to the same network segment.

Tap **Ethernet** on the **Comm**. Settings interface to configure the settings.

5	Ethernet
IP Address	192.168.163.201
Subnet Mask	255.255.255.0
Gateway	192.168.163.1
DNS	114.114.114.114
TCP COMM.Port	4370
DHCP	\bigcirc
Display in Status Bar	
	IP Address Subnet Mask Gateway DNS TCP COMM.Port DHCP

Function Name	Descriptions
IP Address	The default IP address is 192.168.1.201. It can be modified according to the network availability.
Subnet Mask	The default Subnet Mask is 255.255.255.0. It can be modified according to the network availability.
Gateway	The default Gateway address is 0.0.0.0. It can be modified according to the network availability.
DNS	The default DNS address is 0.0.0.0. It can be modified according to the network availability.
TCP COMM. Port	The default TCP COMM Port value is 4370. It can be modified according to the network availability.
DHCP	Dynamic Host Configuration Protocol dynamically allocates IP addresses for clients via server.
Display in Status Bar	Toggle to set whether to display the network icon on the status bar.

6.2 Serial Comm★

Serial Comm function facilitates to establish communication with the device through a serial port (/RS485/ Master Unit).

Tap **Serial Comm.** on the **Comm.** Settings interface.

5	Serial Comm	5	Serial Comm
Serial Port	RS485(PC)	O no using	
Baudrate	115200	• RS485 (PC)	
		O Master Unit	

Function Name	Descriptions
	Disable: Do not communicate with the device through the serial port.
Serial Port	RS485(PC): Communicates with the device through RS485 serial port.
Serial Port	Master Unit: When RS485 is used as the function of " Master unit ", the device will act as a master unit, and it can be connected to RS485 fingerprint & card reader.
	The rate at which the data is communicated with PC, there are 4 options of baud rate: 115200 (default), 57600, 38400, and 19200.
Baud Rate	The higher is the baud rate, the faster is the communication speed, but also the less reliable.
	Hence, a higher baud rate can be used when the communication distance is short; when the communication distance is long, choosing a lower baud rate would be more reliable.

6.3 PC Connection

Comm Key facilitates to improve the security of data by setting the communication between the device and the PC. Once the Comm Key is set, a password is required to connect the device to the PC software.

Tap **PC Connection** on the **Comm.** Settings interface to configure the communication settings.

5	PC Connection	
Comm Key		***
Device ID		1

Function Name	Descriptions
Comm Key	The default password is 0 and can be changed. The Comm Key can contain 1-6 digits.
Device ID	It is the identification number of the device, which ranges between 1 and 254. If the communication method is RS232/RS485, you need to input this device ID in the software communication interface.

6.4 Wireless Network

The device provides a Wi-Fi module, which can be built-in within the device mould or can be externally connected.

The Wi-Fi module enables data transmission via Wi-Fi (Wireless Fidelity) and establishes a wireless network environment. Wi-Fi is enabled by default in the device. If you don't need to use the Wi-Fi network, you can toggle the Wi-Fi to disable button.

Tap **Wi-Fi Settings** on the **Comm.** Settings interface to configure the WiFi settings.

5	Wi-Fi Settings	1= 1=

Gateway		192.168.66.1

Function Name	Description
DHCP	Dynamic Host Configuration Protocol (DHCP) dynamically allocates IP addresses to network clients. If the DHCP is enabled, then the IP cannot be set manually.
IP Address	IP address for the WIFI network, the default is 0.0.0.0. It can be modified according to the network availability.
Subnet Mask	The default Subnet Mask of the WIFI network is 255.255.255.0. It can be modified according to the network availability.
Gateway	The default Gateway address is 0.0.0 <mark>.0. Can</mark> be modified according to the network availability.

6.5 Cloud Server Setting

Tap **Cloud Server Setting** on the **Comm.** Settings interface to connect with the ADMS server.

5	Cloud Server Setting	
Server Mode		ADMS
Enable Domai	n Name	\bigcirc
Server Addres	3S	192.168.163.61
Server Port		8088
Enable Proxy :	Server	\bigcirc
HTTPS		\bigcirc

SpeedFace-V5L Series

Function Name		Description
Enable Domain Server Address Name		Once this mode is turned ON , the domain name mode "http://" will be used, such as http://www.XYZ.com, while "XYZ" denotes the domain name.
Disable	Server Address	The IP address of the ADMS server.
Domain Name	Server Port	Port used by the ADMS server.
Enable Proxy S	erver	The IP address and the port number of the proxy server is set manually when the proxy is enabled.
HTTPS		To increase the security of browser access, users can enable the HTTPS protocol to create a secure and encrypted network transmission and assure the security of sent data through identity authentication and encrypted communication. This function is enabled by default. This function can be enabled or disabled through the menu interface, and when changing the HTTPS status, the device will pop up a security prompt, and restart after confirmation.

6.6 Wiegand Setup

It is used to set the Wiegand input and output parameters.

Tap **Wiegand Setup** on the **Comm.** Settings interface to set the Wiegand input and output parameters.

5	Wiegand Setup
Wiegand Input	
Wiegand Output	

6.6.1 Wiegand Input

5	Wiegand Options
Wiegand Format	
Wiegand Bits	26
Pulse Width(us)	100
Pulse Interval(us)	1000
ID Type	User ID

Function Name	Descriptions
Wiegand Format	Its value can be 26 bits, 34 bits, 36 bits, 37 bits, and 50 bits.
Wiegand Bits	The number of bits of the Wiegand data.
Pulse Width (us)	The value of the pulse width sent by Wiegand is 100 microseconds by default, which can be adjusted within the range of 20 to 100 microseconds.
Pulse Interval (us)	The default value is 1000 microseconds and can be adjusted within the range of 200 to 20000 microseconds.
ID Type	Select between the User ID and card number.

Various Common Wiegand Format Description

Various Common V	Viegand Format Description
Wiegand Format	Description
Wiegand26	ECCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCC
Wiegand26a	ESSSSSSSCCCCCCCCCCCCCCCCCCCCCCCCCCCCCC
Wiegand34	ECCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCC
Wiegand 34a	ESSSSSSSCCCCCCCCCCCCCCCCCCCCCCCCCCCCCC
Wiegand36	OFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF
Wiegand36a	EFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF
Wiegand 37	OMMMMSSSSSSSSSSSSSSSCCCCCCCCCCCCCCCCCCC

Wiegand 37a	EMMMFFFFFFFFFFFFFSSSSSSCCCCCCCCCCCCCCCCC
Wiegand 50	ESSSSSSSSSSSSSSSSSSSSSSSSSSSSSSSSSSSSS
" C " denotes the c	ard number: "F" denotes the even parity bit: "O" denotes the odd parity bit: "F"

"C" denotes the card number; "E" denotes the even parity bit; "O" denotes the odd parity bit; "F" denotes the facility code; "M" denotes the manufacturer code; "P" denotes the parity bit; and "S" denotes the site code.

6.6.2 Wiegand Output

S Wiegand Options	
SRB	\bigcirc
Wiegand Format	
Wiegand output bits	26
Failed ID	Disabled
Site Code	Disabled
Pulse Width(us)	100
Pulse Interval(us)	1000
ID Type	User ID

Function Name	Descriptions		
SRB	When SRB is enabled, the lock is controlled by the SRB to prevent the lock from opening due to device removal.		
Wiegand Format	Its value can be 26 bits, 34 bits, 36 bits, 37 bits, and 50 bits.		
Wiegand Output Bits	After selecting the required Wiegand format, select the corresponding outp digits of the Wiegand format.		
Failed ID	If the verification fails, the system will send the failed ID to the device and replace the card number or personnel ID with the new one.		

Pulse Interval(us)	The time interval between pulses. Select the ID types as either User ID or card number.	
Pulse Width(us)	The time width represents the changes in the quantity of electric charge with regular high-frequency capacitance within a specified time.	
Site Code	It is similar to the device ID. The difference is that a site code can be set manually and is repeatable on a different device. The valid value ranges from 0 to 256 by default.	

6.7 Network Diagnosis

To set the network diagnosis parameters.

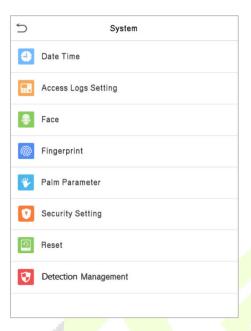

Click **Network Diagnosis** on the Comm. Settings interface. Enter the IP address that needs to be diagnosed, and click **Start the diagnostic test** to check whether the network can connect to the device.

5	Network Diagnosis	
IP address diagno	stic test	0.0.0.0
Start the diagnost	ic test	
		/
-		

7 System Settings

It helps to set related system parameters to optimize the accessibility of the device.

Tap System on the Main Menu interface to get into its menu options.

7.1 Date and Time

Tap **Date Time** on the **System** interface to set the date and time.

5	Date Time	
Date and Time Auto Sy	nc	
Set the NTP Server Ad	dress	0.cn.pool.ntp.org
Select Time Zone		UTC+8:00
24-Hour Time		
Date Format		YYYY-MM-DD

The product supports the NTP synchronization time system by default. This function takes effect after **Date and Time Auto Sync** is enabled and the corresponding NTP server address link is set.

If users need to set date and time manually, disable **Date and Time Auto Sync** first, and then tap **Manual Time Setting** to set date and time and tap Confirm to save.

5	Date Time	
Date and Time Auto Sy	ync	\bigcirc
Manual Date and Time		
Select Time Zone		UTC+8:00
24-Hour Time		
Date Format		YYYY-MM-DD

Tap **Select Time Zone** to select a time zone then tap the return button to save and exit.

Tap **24-Hour Time** to enable or disable this format. If enabled, then select the **Date Format** to set the date format i.e., the way date should be displayed on the device.

*Tap **Daylight Saving Time** to enable or disable the function. If enabled, tap **Daylight Saving Mode** to select a daylight-saving mode and then tap **Daylight Saving Setup** to set the switch time.

Daylight Savin	g Setup	5	Daylight Saving Se	tup
Start Month	1	Start D	ate	00-00
Start Week	1	Start T	ime	00:00
Start Day	Sunday	End Da	te	00-00
Start Time	00:00	End Tir	me	00:00
End Month	1			
End Week	1			
End Day	Sunday			
End Time	00:00			

Week Mode

Date Mode

When restoring the factory settings, the time (24-hour) and date format (YYYY-MM-DD) can be restored, but the device date and time cannot be restored.

Note: For example, if a user sets the time of the device (18:35 on March 15, 2019) to 18:30 on January 1, 2020. After restoring the factory settings, the time of the device will remain at 18:30 on January 1, 2020.

7.2 Access Logs Setting

Click Access Logs Setting on the System interface.

5	Access Logs Setting	
Camera Mode		No photo
Display User Pho	oto	
Access Log Alert	t	99
Periodic Del of A	ccess Logs	Disabled
Periodic Del of A	ATT Photo	99
Periodic Del of B	Blocklist Photo	99
Authentication T	imeout(s)	3
Face comparison	interval(s)	1

Function Name	Description
	This function is disabled by default. When enabled, a security prompt will pop-up and the sound of shutter in the camera will turn on mandatorily. There are 5 modes:
	No Photo: No photo is taken during user verification.
Comore Made	Take photo, no save: Photo is taken but not saved during verification.
Camera Mode	Take photo and save: All the photos taken during verification is saved.
	Save on successful verification: Photo is taken and saved for each successful verification.
	Save on failed verification: Photo is taken and saved only for each failed verification.
Display User Photo	This function is disabled by default. When enabled, a security prompt will pop-up.
Access Log Alert	When the record space of the attendance access reaches the maximum threshold value, the device automatically displays the memory space warning. Users may disable the function or set a valid value between 1 and 9999.
Periodic Del of Access Logs	When access logs reach its maximum capacity, the device automatically deletes a set of old access logs. Users may disable the function or set a valid value between 1 and 999.

Periodic Del of ATT	When attendance photos reach its maximum capacity, the device automatically deletes a set of old attendance photos.					
Photo	Users may disable the function or set a valid value between 1 and 99.					
Periodic Del of Blocklist Photo	When block listed photos reach its maximum capacity, the device automatically deletes a set of old block listed photos. Users may disable the function or set a valid value between 1 and 99.					
Authentication	The amount of time taken to display a successful verification message.					
Timeout (s)	Valid value: 1~9 seconds.					
Face Comparison	The amount of time required to compare facial templates.					
Interval (s)	Valid value: 0~9 seconds.					

7.3 Face Parameters

5 F	ace 11	5	Face	1L
1:N Threshold Value	74	Face Rotation Angle		25
1:1 Threshold Value	63	Image Quality		40
Face Enrollment Threshold	70	Minimum Face Size		80
Face Pitch Angle	35	LED Light Trigger Value	e	80
Face Rotation Angle	25	Motion Detection Sensi	tivity	4
Image Quality	40	Live Detection	(\supset
Minimum Face Size	80	Live Detection Thresho	ld	50
LED Light Trigger Value	80	Anti-spoofing using NIF	3	
Motion Detection Sensitivit	у 4	WDR	(\supset
Live Detection	\bigcirc	Anti-flicker Mode		50HZ
Live Detection Threshold	50	Face Algorithm		
Anti-spoofing using NIR		Save Photo as Template		

Tap **Face** on the **System** interface to go to the face parameter settings.

Function Name	Description	
1:N Match Threshold	Under 1:N verification mode, the verification will only be successful when the similarity between the acquired facial image and all registered facial templates is greater than the set value. The valid value ranges from 65 to 120. The higher the thresholds, the lower the misjudgement rate and the higher the rejection rate, and vice versa. It is recommended to set the default value of 75.	

1:1 Match Threshold	Under 1:1 verification mode, the verification will only be successful when the similarity between the acquired facial image and the user's facial templates enrolled in the device is greater than the set value.
	The valid value ranges from 55 to 120. The higher the thresholds, the lower the misjudgement rate and the higher the rejection rate, and vice versa. It is recommended to set the default value of 63.
Face Enrollment	During face enrollment, 1:N comparison is used to determine whether the user has already registered before.
Threshold	When the similarity between the acquired facial image and all registered facial templates is greater than the set threshold, it indicates that the face has already been registered.
	It is the pitch angle tolerance of a face for facial template registration and comparison.
Face Pitch Angle	If a face's pitch angle exceeds the set value, it will be filtered by the algorithm, i.e., ignored by the terminal thus no registration and comparison interface will be triggered.
	It is the rotation angle tolerance of a face for facial template registration and comparison.
Face Rotation Angle	If a face's rotation angle exceeds the set value, it will be filtered by the algorithm, i.e., ignored by the terminal thus no registration and comparison interface will be triggered.
Image Quality It is the image quality for facial registration and comparison. The high value, the clearer image is required.	
	It sets the minimum face size requ <mark>ired for</mark> facial registration and comparison.
	If the minimum size of the captured image is smaller than the set value, then it will be filtered off and not recognized as a face.
Minimum Face Size	This value can also be interpreted as the face comparison distance. The farther the individual is, the smaller the face, and the smaller number of pixels of the face obtained by the algorithm. Therefore, adjusting this parameter can adjust the farthest comparison distance of faces. When the value is 0, the face comparison distance is not limited.
LED Light Trigger Threshold	This value controls the turning on and off of the LED light. The larger the value, the LED light will turn on or off more frequently.
Motion Detection	It sets the value for the amount of change in a camera's field of view known as potential motion detection that wakes up the terminal from standby to the comparison interface.
Sensitivity	The larger the value, the more sensitive the system would be, i.e., if a larger value is set, the comparison interface activates with much ease, and the motion detection is frequently triggered.
Live Detection	It detects the spoof attempt using visible light images to determine if the provided biometric source sample is of a real person (a live human being) or a false representation.
Live Detection Threshold	It facilitates judging whether the captured visible image is a real person (a live human being). The larger the value, the better the anti-spoofing performance using visible light.

Anti-counterfeiting with NIR	Using near-infrared spectra imaging to identify and prevent fake photos and videos attack.	
WDR	Wide Dynamic Range (WDR) balances light and extends image visibility for surveillance videos under high contrast lighting scenes and improves object identification under bright and dark environments.	
Anti-flicker Mode	It is used when WDR is turned off. It helps to reduce flicker when the device's screen flashes at the same frequency as the light.	
Face Algorithm	It has facial algorithm related information and pause facial template update.	
Save Photo as Template	This function is enabled by default, and the menu interface supports enabling or disabling this function, and there is a security prompt when switching. When this function is disabled, it will indicate that there is a risk reminder: "Face re- registration is required after an algorithm upgrade. "	

Note: Improper adjustment of the exposure and quality parameters may severely affect the performance of the device. Please adjust the exposure parameter only under the guidance of the after-sales service personnel of our company.

Process to modify the Face Recognition Accuracy

- On the **System** interface, tap on **Face** and then toggle to enable Anti-Spoofing using NIR to set the anti-spoofing.
- Then, on the Main Menu, tap Auto-Test > Test Face and perform the face test.
- Tap three times for the scores on the right upper corner of the screen, and the red rectangular box appears to start adjusting the mode.
- Keep one arm distance between the device and the face. It is recommended not to move the face in a wide range.

7.4 Fingerprint Parameters

Click **Fingerprint** on the System interface.

15
35
Low
3
Always show

FRR	FAR	Recommended matching thresholds	
		1:N	1:1
High	Low	45	25
Medium	Medium	35	15
Low	High	25	10

Function Name	Descriptions	
1:1 Match Threshold	Under 1:1 verification method, the verification will only be successful when the similarity between the acquired fingerprint data and the fingerprint template associated with the entered user ID enrolled in the device is greater than the set value.	
1:N Match Threshold	Under 1:N verification method, the verification will only be successful when the similarity between the acquired fingerprint data and the fingerprint templates enrolled in the device is greater than the set value.	
FP Sensor Sensitivity	To set the sensibility of fingerprint acquisition. It is recommended to use the default level " Medium ". When the environment is dry, resulting in slow fingerprint detection, you can set the level to " High " to raise the sensibility; when the environment is humid, making it hard to identify the fingerprint, you can set the level to " Low ".	
1:1 Retry Times	In 1:1 Verification, users might forg <mark>et th</mark> e registered fingerprint, or press the finger improperly. To reduce the process of re-entering user ID, retry is allowed.	
	This function is disabled by default. After disabling it, the fingerprint image will not be displayed when registering and verifying fingerprints. The menu interface allows to enable or disable this function, and there are security prompts when switching. Four choices are available:	
Fingerprint Image	Show for enroll : to display the fingerprint image on the screen only during enrollment.	
	Show for match : to display the fin <mark>gerprin</mark> t image on the screen only during verification.	
	Always show : to display the fingerprint image on screen during enrollment and verification.	
	None: not to display the fingerprint image.	

7.5 Video Intercom Parameters

Click Video intercom parameters on the System interface.

S Video intercom parar	neters
QR code binding	
Intercom Server Setting	
Calling Timeout(s)	20

Function Name	Description	
QR Code Binding	Use the ZSmart APP client to scan the QR code to connect and bind the device.	
Intercom Server Setting	Set the IP address and port number of the intercom server.	
	Server Address: Enter the sever installation IP address.	
	Server Port: It is the service port set during installation (not the ADMS port).	
Calling Timeout (s)	If the call is not answered within a specified time, it exits to the main interface.	

7.6 Security Settings

Tap **Security Settings** on the **System** interface.

Secu	irity Settings		
ecurity Mode			
standalone Communicatio	on		
SH			
Jser ID Masking			
Display Verification Name	9	\bigcirc	
Display Verification Mode	1	\bigcirc	

Function Name	Description	
	When enabled, user information verification has a high level of security. This function can be enabled or disabled via the menu interface. When switching on and off, there are security prompts. All data will be deleted and the device will be restarted after confirmation.	
Security Mode	Note: After turning on the security mode, the product will forcibly enable the function of returning to the standby interface when the menu times out by default (default 60s). It does not support disabling in security mode, but it does support disabling in non-security mode. To configure, go to Personalize > User Interface > Menu Screen Timeout(s) .	

Standalone Communication	By default, this function is disabled. This function can be enabled or disabled via the menu interface. When it is switched on, a security prompt appears, and the device will restart after you confirm.	
SSH	The device does not support the Telnet feature, hence SSH is typically used for remote debugging. By default, SSH is enabled. The menu interface allows you to enable and disable SSH. When enabled, there will be a security prompt, but the device will not need to be restarted after confirmation.	
User ID Masking	D Masking After enabled, the User ID will be partially displayed after the personne verification result (only the User ID with more than 2 digits supports the masking display), and it is enabled by default.	
Display Verification Name	After enabled, the user's name will be displayed after the personnel verification result. The verification result will not show the name after disabling it.	
Display Verification Mode	After enabled, the personnel verification result will show the user's verification mode. The verification result will not show the verification mode after you disable it.	

7.7 Factory Reset

The Factory Reset function restores the device settings such as communication settings and system settings, to the default factory settings (this function does not clear registered user data).

Tap **Reset** on the **System** interface and then tap **OK** to restore the default factory settings.

System

7.8 Detection Management 🖈

Click **Detection Management** on the System interface.

Detection Management	11
nable temperature screening with infrared	
n temperature alarm threshold	37.30°C
erature over the range; access denied	
perature deviation correction	0.00
b. Unit	°C
perature measurement distance	Far
ole palm temp. detection	
erature calibration	
ay Body Temperature	
ble mask detection	
access without mask	
w unregistered people to access	

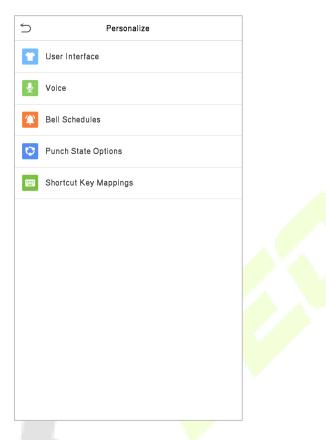

Function Name	Description
Enable Temperature Screening with Infrared	To enable or disable the infrared temperature measurement function. When this function is enabled, before the access is granted, users must pass the temperature screening in addition to identity verification. To measure body temperature, users' faces must be aligned with the temperature measurement area.
High Temperature Alarm Threshold	To set the value of the alarm threshold of high body temperature. When the temperature measured during verification is higher than the set value, the device will give a prompt and audio alarm. The default alarm threshold is 37.30°C.
Temperature Over the Range; Access Denied	When this function is enabled, if the user's body temperature measured is above (or below) the alarm threshold, the user will not be granted access even if his/her identity is verified. If this function is disabled, the user is allowed to access the restricted area when his/her identity is verified, regardless of his/her body temperature.
Temperature Deviation Correction	As the temperature measurement module allows a small range of errors (disturbance) of an observed value under different environments (humidity, room temperature and such), users may set the deviation value here.
Temp. Unit	The unit of body temperature can be switched between Celsius (°C) and Fahrenheit (°F).

Temperature Measurement Distance	When measuring temperature during the verification process, there are three modes: Near, Close and Far.
Display Thermodynamics Figure★	To enable or disable the display of the thermal image of a person. When enabled, the thermal image of the person is be displayed in the upper left corner of the device during the detection process.
Enable Palm Temp. Detection ★	To enable or disable the palm temperature detection function. When enabled, the device will display the user's palm temperature during the verification process. Note: This function is not enabled by default, and can be upgraded to support.
Temperature Calibration★	Calibrate the temperature by comparing the current temperature value with the surface temperature value of the device.
Enable Mask Detection	To enable or disable the mask detection function. When it's enabled, the device will identify whether the user is wearing a mask or not during verification.
Display Body Temperature	To enable or disable the display body temperature function. When enabled, the device will display the user's specific temperature value during the verification process.
Enable Mask Detection	To enable or disable the mask detection function. When it's enabled, the device will identify whether the user is wearing a mask or not during verification.
Deny Access without Mask	To enable or disable the deny access without mask function. When it's enabled, even if the body temperature is normal, the person who does not wear a mask will not allow the person to enter.
Allow Unregistered People to Access	To enable or disable the unregistered people to access function. When enabled, as long as the person who passes the detection, the device allows the personnel to enter without registration.
Enable Capture of Unregistered Person	To enable or disable the capture of unregistered person function. When enabled, the device will automatically capture the photo of the unregistered person, enabling this feature requires to enable Allow Unregistered People to Access .
Trigger External Alarm★	When enabled, if the user's temperature is higher than the set threshold value or the mask detection is enabled, but the mask is not worn by the person, it will trigger an alarm.
Clear External Alarm ★	It clears the triggered alarm records of the device.
External Alarm Delay(s)★	The delay (s) time for triggering an external alarm. It can be set in seconds. Users may disable the function or set a value between 1 to 255.

Firmware Update ★	Choose whether to update the thermal imaging temperature detection
	module software version.

8 Personalize Settings

Tap **Personalize** on the **Main Menu** interface to customize interface settings, voice, bell, punch state options, and shortcut key mappings.

8.1 Interface Settings

Tap **User Interface** on the **Personalize** interface to customize the display style of the main interface.

5	User Interface	
Wallpaper		
Language		English
Menu Screen 1	Fimeout(s)	60
Idle Time to SI	ide Show(s)	60
Slide Show Int	erval(s)	30
Idle Time to SI	eep(m)	Disabled
Main Screen S	tyle	Style 1

Function Name	Description
Wallpaper	It helps to select the main screen wallpaper according to the user preference.
Language	It helps to select the language of the device.
Menu Screen	When there is no operation, and the time exceeds the set value, the device automatically goes back to the initial interface.
Timeout (s)	The function can either be disabled or set the required value between 60 and 99999 seconds.
Idle Time To Slide Show (s)	When there is no operation, and the time exceeds the set value, a slide show is displayed. The function can be disabled, or you may set the value between 3 and 999 seconds.
Slide Show Interval (s)	It is the time interval in switching between different slide show pictures. The function can be disabled, or you may set the interval between 3 and 999 seconds.
Idle Time To Sleep (m)	If the sleep mode is activated, and when there is no operation in the device, then the device will enter standby mode. This function can be disabled or set a value within 1-999 minutes.
Main Screen Style	The style of the main screen can be selected according to the user preference.

8.2 Voice Settings

Tap **Voice** on the **Personalize** interface to configure the voice settings.

5	Voice	
Voice Prompt		
Touch Prompts		
Volume		70

Function Name	Description	
Voice Prompt	Select whether to enable voice prompts during operating.	
Touch Prompt	Select whether to enable keypad sounds.	
Volume	Adjust the volume of the device; valid value: 0-100.	

8.3 Bell Schedules

Tap **Bell Schedules** on the **Personalize** interface to configure the Bell settings.

5	Bell Schedules
New Bell Schedule	
All Bell Schedules	

New Bell Schedule

Tap **New Bell Schedule** on the **Bell Schedule** interface to add a new bell schedule.

Sell Schedules	Ś	New Bell Schedule
New Bell Schedule	Bell Status	\bigcirc
All Bell Schedules	Bell Time	
	Repeat	Never
	Ring Tone	bell01.wav
	Internal bell	delay(s) 5

Function Description

Function Name	Description
Bell Status	Toggle to enable or disable the bell status.
Bell Time	Once the required time is set, the device automatically triggers to ring the bell during that time.
Repeat	Set the required number of counts to repeat the scheduled bell.
Ring Tone	Select a ringtone.
Internal Bell Delay(s)	Set the replay time of the internal bell. Valid values range from 1 to 999 seconds.

All Bell Schedules

Once the bell is scheduled, on the **Bell Schedules** interface, tap **All Bell Schedules** to view the newly scheduled bell.

• Edit the Scheduled Bell

On the **All Bell Schedules** interface, tap on the required bell schedule, and tap **Edit** to edit the selected bell schedule. The editing method is the same as the operations of adding a new bell schedule.

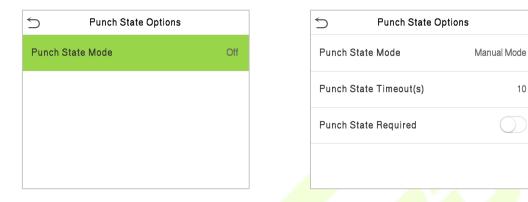

10

Delete a Bell

On the All Bell Schedules interface, tap the required bell schedule, and tap Delete, and then tap Yes to delete the selected bell.

Punch States Options 8.4

Tap **Punch States Options** on the **Personalize** interface to configure the punch state settings.

-			
Function Name	Description		
	Select a punch state mode, which can be: Off: It disables the punch state function. And the punch state key set under the Shortcut Key Mappings menu becomes invalid. Manual Mode: Switch the punch state key manually, and the punch state key will disappear after Punch State Timeout. Auto Mode: The punch state key will automatically switch to a specific punch status according to the predefined schedule which can be set in the		
Punch State Mode	Shortcut Key Mappings. Manual and Auto Mode: The main interface will display the auto-switch punch state key. However, the users will still be able to select an alternative that is the manual attendance status. After the timeout, the manual switching punch state key will become an auto-switch punch state key.		
	Manual Fixed Mode: After the punch state key is set manually to a particular punch status, the function will remain unchanged until manually switched again.		
	Fixed Mode: Only the manually fixed punch state key is shown. Users cannot change the status by pressing any other keys.		
Punch State Timeout (s)	It is the amount of time for which the punch state is displayed. The value ranges from 5~999 seconds.		
Punch State Required	To choose whether an attendance state needs to be selected during verification.		

8.5 Shortcut Keys Mappings

Users may define shortcut keys for attendance status and functional keys on the main interface. So, on the main interface, when the shortcut keys are pressed, the corresponding attendance status or the function interface displays directly.

5	Shortcut Key Mappings
F1	Check-In
F2	Check-Out
F3	Break-Out
F4	Break-In
F5	Overtime-In
F6	Overtime-Out

Tap **Shortcut Key Mappings** on the **Personalize** interface to set the required shortcut keys.

- On the Shortcut Key Mappings interface, tap on the required shortcut key to configure the shortcut key settings.
- On the **Shortcut Key** ("F1") interface, tap **function** to set the functional process of the shortcut key either as punch state key or function key.
- If the Shortcut key is defined as a function key (such as New user, All users, etc.), the configuration is done as shown in the image below.

		_			
5	F1		5	F1	
Punch State Value	0		Function		New User
Function	Punch State Options				
Name	Check-In				
]			

• If the Shortcut key is set as a punch state key (such as check-in, check-out, etc.), then it is required to set the punch state value (valid value 0~250), name, and switch time.

9 Data Management

On the Main Menu, tap Data Mgt. to delete the relevant data in the device.

5	Data Mgt.	
⑪	Delete Data	

9.1 Delete Data

Tap **Delete Data** on the **Data Mgt.** interface to delete the required data.

\supset	Delete Data	
Delete Access	Records	
Delete Attenda	ance Photo	
Delete Blocklis	t Photo	
Delete All Data	1	
Delete Admin F	Role	
Delete Access	Control	
Delete User Ph	noto Templates	
Delete Profile I	Photo	
Delete Wallpap	per	
Delete Screen	Savers	

Function Name	Description			
Delete Access Records	To delete attendance data/access records conditionally.			
Delete Attendance Photo	To delete attendance photos of designated personnel.			
Delete Blocklist Photo	To delete the photos taken during failed verifications.			
Delete All Data	To delete information and attendance logs/access records of all registered users.			
Delete Admin Role	To remove all administrator privileges.			
Delete Access Control	To delete all access data.			
Delete User Photo Templates	To delete user photo templates in the device. When deleting template photos, there is a risk reminder: "Face re-registration is required after an algorithm upgrade."			

Delete Profile Photo	To delete all user photos in the device.
Delete Wallpaper	To delete all wallpapers in the device.
Delete Screen Savers	To delete the screen savers in the device.

The user may select **Delete All** or **Delete by Time Range** when deleting the access records, attendance photos or block listed photos. Selecting **Delete by Time Range**, you need to set a specific time range to delete all data within a specific period.

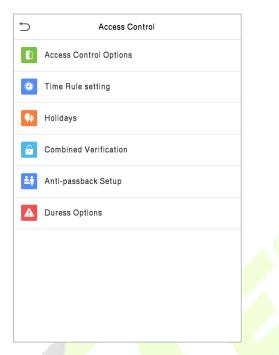

Delete Access Records	5	St	art Time			
Delete All						
Delete by Time Range		2020-	12-08 00:0	0		
	2020	12	08	00	00	
	-	•	•		•	
	YYYY	ММ	DD	нн	ММ	
	Confirm	(0K)		Cancel (E	500	
	Confirm			Cancel (E	-30)	

Select Delete by Time Range

Set the time range and click **OK**

10 Access Control

On the **Main Menu**, tap **Access Control** to set the schedule of the door opening, locks control and to configure other parameters settings related to access control.

To gain access, the registered user must meet the following conditions:

- The relevant door's current unlock time should be within any valid time zone of the user's time period.
- The corresponding user's group must be already set in the door unlock combination (and if there are other groups, being set in the same access combo, then the verification of those group's members is also required to unlock the door).
- In default settings, new users are allocated into the first group with the default group time zone, where the access combo is "1" and is set in unlock state by default.

10.1 Access Control Options

Tap **Access Control Options** on the **Access Control** interface to set the parameters of the control lock of the terminal and related equipment.

Access Control	Access Control Options				
Gate Control Mode	\bigcirc				
Door Lock Delay (s)	5				
Door Sensor Delay (s)	10				
Door Sensor Type	Normal Close (NC)				
Verification Mode	Password/Fingerprint/Fa				
Door available time period	1				
Normal open time period	None				
Master Device	Out				
Slave Device	Out				
Auxiliary input configuration					
Speaker Alarm	\bigcirc				
Reset Access Setting					

S Access Contro	l Options
Gate Control Mode	
Verification Mode	Password/Fingerprint/Fa
Door available time period	1
Normal open time period	None
Master Device	Out
Slave Device	Out
Auxiliary input configuration	
Speaker Alarm	\bigcirc
Reset Access Setting	

Function Name	Description
	It toggles between ON or OFF switch to get into gate control mode or not.
Gate Control Mode	When set to ON , the interface removes the Door lock relay, Door sensor relay, and Door sensor type options.
Door Lock Delay (s)	The length of time that the device controls the electric lock to be in unlock state.
	Valid value: 1~10 seconds; 0 seconds represents disabling the function.
Door Sensor Delay (s)	If the door is not locked and is left open for a certain duration (Door Sensor Delay), an alarm will be triggered.
	The valid value of Door Sensor Delay ranges from 1 to 255 seconds.
	There are three Sensor types: None, Normal Open, and Normal Closed.
	None: It means the door sensor is not in use.
Door Sensor Type	Normally Open: It means the door is always left open when electric power is on.
	Normally Closed: It means the door is always left closed when electric power is
	on.

Verification Mode	The supported verification mode includes Password/Fingerprint/Face, Fingerprint only, User ID only, Password, User ID + Fingerprint, Fingerprint + Password, User ID + Fingerprint + Password, Face only, Face + Fingerprint, Face + Password, Face + Fingerprint + Password.
Door Available Time Period	It sets the timing for the door so that the door is accessible only during that period.
Normal Open Time Period	It is the scheduled time-period for "Normal Open" mode so that the door is always open during this period.
	While configuring the master and slave devices, you may set the state of the master as Out or In .
Master Device	Out : A record of verification on the master device is a check-out record.
	In : A record of verification on the master device is a check-in record.
	While configuring the master and slave devices, you may set the state of the slave as Out or In .
Slave Device	Out : A record of verification on the slave device is a check-out record.
	In : A record of verification on the slave device is a check-in record.
Auxiliary Input Configuration	Sets the door unlock time period and auxiliary output type of the auxiliary terminal device. Auxiliary output types include None, Trigger door open, Trigger Alarm, Trigger door open and Alarm.
Speaker Alarm	It transmits a sound alarm or disassembly alarm from the local. When the door is closed or the verification is successful, the system cancels the alarm from the local.
Reset Access Setting	The access control reset parameters include door lock delay, door sensor delay, door sensor type, verification mode, door available time period, normal open time period, master device, and alarm. However, erased access control data in Data Mgt. is excluded.

10.2 Time Schedule

Tap **Time Rule Setting** on the Access Control interface to configure the time settings.

- The entire system can define up to 50 Time Periods.
- Each time-period represents **10** Time Zones, i.e., **1** week and **3** holidays, and each time zone is a standard 24 hour period per day and the user can only verify within the valid time-period.
- One can set a maximum of 3 time periods for every time zone. The relationship among these timeperiods is "**OR**". Thus, when the verification time falls in any one of these time-periods, the verification is valid.
- The Time Zone format of each time-period is **HH MM-HH MM**, which is accurate to minutes according to the 24-hour clock.

Tap the grey box to search the required Time Zone and specify the required Time Zone number (maximum up to 50 zones).

5	Time Rule[2/50]
Sunday	[00:00 23:59] [00:00 23:
Monday	[00:00 23:59] [00:00 23:
Tuesday	[00:00 23:59] [00:00 23:
Wednesday	[00:00 23:59] [00:00 23:
Thursday	[00:00 23:59] [00:00 23:
Friday	[00:00 23:59] [00:00 23:
Saturday	[00:00 23:59] [00:00 23:
holiday type 1	[00:00 23:59] [00:00 23:
holiday type 2	[00:00 23:59] [00:00 23:
holiday type 3	[00:00 23:59] [00:00 23:
	Q

On the selected Time Zone number interface, tap on the required day (that is Monday, Tuesday, etc.) to set the time.

5		Time P	eriod 1		
00:00 23:59					
	00	00	23	59	
	~	-	-	-	
	нн	ММ	нн	мм	
	Confirm (C	υK)	Са	ncel (ESC)	

Specify the start and the end time, and then tap **OK**.

Note:

- The door is inaccessible for the whole day when the End Time occurs before the Start Time (such as 23:57~23:56).
- It is the time interval for valid access when the End Time occurs after the Start Time (such as 08:00~23:59).
- The door is accessible for the whole day when the End Time occurs after the Start Time (such that Start Time is **00:00** and End Time is **23:59**).
- The default Time Zone 1 indicates that the door is open all day long.

10.3 Holidays

Whenever there is a holiday, you may need a distinct access time; but changing everyone's access time one by one is extremely cumbersome, so a holiday access time can be set that applies to all employees and the user will be able to open the door during the holidays.

Tap Holidays on the Access Control interface to set the Holiday access.

5	Holidays	
Add Holiday		
All Holidays		

Add a New Holiday

Tap Add Holiday on the Holidays interface and set the holiday parameters.

5	Holidays
No.	1
Date	Undefined
Holiday Type	holiday type 1
Repeats Every Year	

Edit a Holiday

On the Holidays interface, select a holiday item to be modified. Tap Edit to modify holiday parameters.

Delete a Holiday

On the **Holidays** interface, select a holiday item to be deleted and tap **Delete**. Press **OK** to confirm the deletion. After deletion, this holiday does not display on the **All Holidays** interface.

10.4 Combined Verification

Access groups are arranged into different door-unlocking combinations to achieve multiple verifications and strengthen security.

In a door-unlocking combination, the range of the combined number N is $0 \le N \le 5$ and the number of members N may all belong to one access group or may belong to five different access groups.

Tap **Combined Verification on** the **Access Control** interface to configure the combined verification setting.

5	Combined Verification
1	01 00 00 00 00
2	00 00 00 00 00
3	00 00 00 00 00
4	00 00 00 00 00
5	00 00 00 00 00
6	00 00 00 00 00
7	00 00 00 00 00
8	00 00 00 00 00
9	00 00 00 00 00
10	00 00 00 00 00
	Q

On the combined verification interface, tap the Door-unlock combination to be set, and tap the **up** and **down** arrows to input the combination number, and then press **OK**.

For Example:

- If the **Door-unlock combination 1** is set as **(01 03 05 06 08)**. It indicates that the unlock combination 1 consists of 5 people and all the 5 individuals are from 5 groups, namely, AC Group 1, AC Group 3, AC Group 5, AC Group 6, and AC Group 8, respectively.
- If the **Door-unlock combination 2** is set as **(02 02 04 04 07)**. It indicates that the unlock combination 2 consists of 5 people; the first two are from AC Group 2, the next two are from AC Group 4, and the last person is from AC Group 7.
- If the **Door-unlock combination 3** is set as **(09 09 09 09 09)**. It indicates that there are 5 people in this combination; all of which are from AC Group 9.
- If the Door-unlock combination 4 is set as (03 05 08 00 00). It indicates that the unlock combination 4 consists of only three people. The first person is from AC Group 3, the second person is from AC Group 5, and the third person is from AC Group 8.

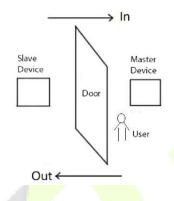

Note: To delete the door-unlock combination, set all Door-unlock combinations to 0.

10.5 Anti-passback Setup

A user may be followed by some person(s) to enter the door without verification, resulting in a security breach. So, to avoid such situations, the Anti-Passback option was developed. Once it is enabled, the check-in and check-out record must occur alternatively to open the door to represent a consistent pattern.

This function requires two devices to work together:

One device is installed on the indoor side of the door (master device), and the other one is installed on the outdoor side of the door (the slave device). The two devices communicate via the Wiegand signal. The Wiegand format and Output type (User ID / Card Number) adopted by the master device and slave device must be consistent.

Tap Anti-Passback Setup on the Access Control interface.

S Anti-passba	ick Setup	5	Anti-passback Direction
Anti-passback Direction	No Anti-passback		No Anti-passback
		0	Out Anti-passback
		0	In Anti-passback
		0	In/Out Anti-passback

Function Name	Description
	No Anti-Passback: The Anti-Passback function is disabled, which means successful verification through either the master device or slave device can unlock the door. The attendance state is not saved in this option.
Anti nasshask	Out Anti-Passback: The user can check-out only if the last record is a check-in record otherwise an alarm is raised. However, the user can check-in freely.
Anti-passback Direction	In Anti-Passback: The user can check-in again only if the last record is a check-out record otherwise an alarm is raised. However, the user can check-out freely.
	In/Out Anti-Passback: In this case, a user can check-in only if the last record is a check-out or the user can check-out only if the last record is a check-in otherwise the alarm is triggered.

10.6 Duress Options Settings

Once a user activates the duress verification function with a specific authentication method(s), and when he/she is under coercion and authenticates using duress verification, the device unlocks the door as usual. At the same time, a signal is sent to trigger the alarm as well.

On the Access Control interface, tap Duress Options to configure the duress settings.

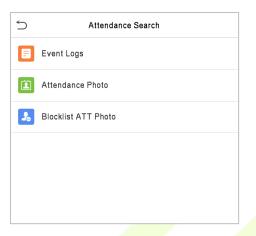

5	Duress Options
Alarm on Password	\bigcirc
Alarm on 1:1 Match	\bigcirc
Alarm on 1: N Match	\bigcirc
Alarm Delay(s)	10
Duress Password	None

Function Name	Description		
Alarm on Password	When a user use <mark>s the</mark> password verification method, an alarm signal will be generated, otherwise there will be no alarm signal.		
Alarm on 1:1 Match	Alarm on 1:1 Match When a user uses the 1:1 verification method, an alarm signal will be generated otherwise there will be no alarm signal.		
Alarm on 1:N Match	When a user uses the 1:N verification method, an alarm signal will be generated, otherwise there will be no alarm signal.		
Alarm Delay (s) Alarm signal will not be transmitted until the alarm delay time is elapsed value ranges from 1 to 999 seconds.			
Duress Password Set the 6-digit duress password. When the user enters this duress password verification, an alarm signal will be generated.			

11 Attendance Search

Once the identity of a user is verified, the access record is saved in the device. This function enables users to check their event logs.

Select Attendance Search on the Main Menu interface to search for the required event Logs.

The process of searching for attendance and blocklist photos is similar to that of searching for event logs. The following is an example of searching for event logs.

On the **Attendance Search** interface, tap **Event Logs** to search for the required record.

- 1. Enter the user ID to be searched and tap **OK**. If you want to search for records of all users, tap **OK** without entering any user ID.
- 2. Select the time range in which the records need to be searched.

	5 User ID		5		Time Range		
-	Pleas	e Input(query a	III data without	input)		۲	Today
						0	Yesterday
						0	This week
						0	Last week
						0	This month
						0	Last month
						0	All
						0	User Defined
	1	2	3	$\overline{\mathbf{X}}$			
	4	5	6	^			
	7	8	9	\sim			
	ESC	0	123	ОК			

3. Once the record search completes. Tap the record highlighted in green to view its details.

5		Personal Record Search
Date	User ID	Time
2-08		Number of Records:05
	0	08:16 08:16 06:19 06:18 06:18
12-07		Number of Records:48
	0	15:05 15:05 13:41 13:41 13:31
		13:30 13:29 13:28 13:27 13:27
		13:27 13:27 13:26 13:26 13:28

Verification Mo	da : Othar C	tatua : 0			
vernication Mo	ue Uther S	14105 2			

12 Autotest

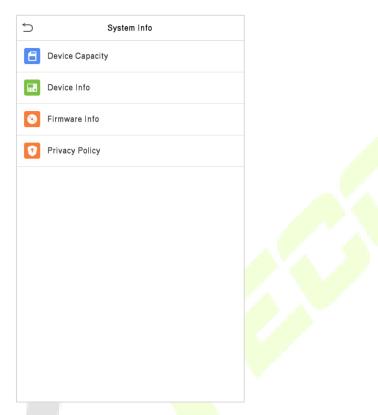

Select **Main Menu**, tap **Autotest.** It enables the system to automatically test whether the functions of various modules are working normally, including the LCD, Voice, Camera, and Real-Time Clock (RTC).

5	Autotest	
	Test All	
	Test LCD	
	Test Voice	
	Microphone test	
	Test Fingerprint Sensor	
	Test Face	
•	Test Clock RTC	

Function Name	Description
Test All	To automatically test whether the LCD, audio, camera and RTC are normal.
Test LCD	To automatically test the display effect of LCD screen by displaying full-color, pure white, and pure black to check whether the screen displays colors normally.
Test Voice	To automatically test whether the audio files stored in the device are complete and the voice quality is good.
Microphone Test	To test if the microphone is working properly by speaking into the microphone.
Test Fingerprint Sensor	To test the fingerprint sensor by pressing a finger on the scanner to check if the acquired fingerprint image is clear. When you are pressing a finger on the scanner, the fingerprint image will display on the screen.
Test Face	To test if the camera functions properly by checking the pictures taken to see if they are clear enough.
Test Clock RTC	To test the RTC. The device tests whether the clock works normally and accurately with a stopwatch. Touch the screen to start counting and press it again to stop counting.

13 System Information

On the **Main Menu**, tap **System Info** to view the storage status, the version information of the device, and firmware information.

Function Name	Description				
Device Capacity	Displays the current device's user storage, password, and face storage, administrators, access records, attendance and blocklist photos, and user photos.				
Device Info	Displays the device's name, serial number, MAC address, face algorithm, platform information, and manufacturer and manufacture date.				
Firmware Info	Displays the firmware version and other version information of the device.				
Privacy Policy	The privacy policy control will appear when the gadget turns on for the first time. After clicking "I have read it," the customer can use the product regularly. Click System Info -> Privacy Policy to view the content of the privacy policy. The privacy policy's content does not allow for U disc export. Note: The current privacy policy's text is only available in Simplified Chinese/English. However, translation of other multi-language content is underway, with more iterations.				

14 LAN Video Intercom Function Settings 🖈

14.1 Installing ZKBio VMS Plugin in the ZKBioSecurity Software

Install the ZKBioSecurity Software

While installing, select the "VMS" module of the ZKBioSecurity software to install, as shown in the following installation interface.

Setup - ZKBioSecurityV5000	 AD Integration LED Arteco&C2P Integration Middle Table Line Integration FaceKiosk Video Parking Temperature Mgmt
	< <u>B</u> ack Cancel <u>N</u> ext >

Note: The Video module and the VMS module cannot be selected at the same time.

Installing the ZKBio VMS Plugin

Double-click on the provided **ZKBioVMSPlugin_sqlite.exe** file to install the ZKBio VMS Plugin.

Note: The ZKBioSecurity software and ZKBio VMS Plugin need to be opened simultaneously to recognize the intercom function.

14.2 Configuration Parameters

Set the required parameters correctly to ensure a connection between the device and the software.

- 1. Add site on the Video-VMS plugin
- a. Double click the icon to open the Video-VMS Plugin. Click *Choose site > Site management > Add on the login interface. Then, enter the Name, IP address, and Port to add a site, as shown in the following figure.

TKBio VMS Plugin	× <u>Choose site</u>	* TKBio VMS Plugin Back
admin		Site Setting
English Auto login		Site: Site: Site management
Login		Login
Site management	- ×	Add site – X
Site list No. Name IP address Port	Add	Name: VMS
	Edit	IP address: 192.168.163.61
	Delete	Port. 5252
		Save Cancel

IP address: Enter the local IP address.

Port: The default port is 5252.

b. Enter the username and the password after adding the site and click **Login** to login the Video-VMS plugin. The username and the initial password are both **admin**.

И	•	ZK Bio VI	MS Plugin	× <u>Choose site</u>	
	2	admin			
	*	••••			
	۲	English			
	✓ Rem	nember password Login	Auto login		

Note: When the Video-VMS plugin is connected successfully to the ZKBioSecurity, the password changes synchronously to the admin user password of the ZKBioSecurity.

2. Configure the connection path of the ZKBioSecurity and VMS plugin

Click **Video** > **Connection** > **Connection Management** on the ZKBioSecurity software to change the path, as shown in the following image:

ZKTeco	· 오 🚺 🛃 🐵	🙁 admin 👻
⊡	VMS System	
☐ Video Device ⊕	VMS Connection Path http://192.168.163.81:8489

14.3 Video Preview on the ZKBioSecurity Software

Click **Video** > **Real-Time Monitoring** > **Video Preview** to enter the preview interface of the device.

14.4 Make a Call on the Device

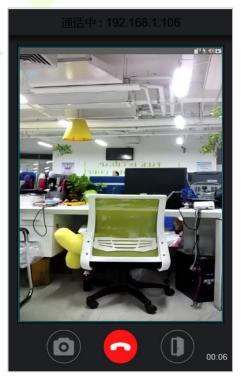

1. Click on (icon on the welcome screen of the device to make a call.

2. The server page pops up the call window by default, as shown in the following figure.

Call Interface

In-call Interface

Function Description

S	It is the Answer key, the user can click to answer the current call. After answering, enter the window during the call, and turn on audio and video by default.
ि	It is the Hang up key. After hanging up, immediately end the current call.
	It is the Ignore key, used to ignore the current call. Click it to close the call window, and the icon in the upper right corner will display the number of pending calls, like this in the user can click the icon in the drop-down menu to open the call window of the current device again and choose to answer, as shown following figure.
	It is the Hang up key, used to hang up the current call.
	It is the Snapshot key, used to take a snapshot.
	It is the Remote Open key, used to open the door remotely. The default lock drive time is 5 seconds.

Note: If the device preview interface is opened on the ZKBioSecurity software, the call interface will no longer be displayed in this call window.

15 Connect to ZKBioAccess MTD Software

15.1 Set the Communication Address

Device Side

1. Tap **COMM.** > **Ethernet** in the main menu to set the IP address and gateway of the device.

(**Note:** The IP address should be able to communicate with the ZKBioAccess MTD server, preferably in the same network segment with the server address)

2. In the main menu, click **COMM.** > **Cloud Server Setting** to set the server address and server port.

Server address: Set the IP address as of ZKBioAccess MTD server.

Server port: Set the server port as of ZKBioAccess MTD (The default is 8088).

⇒ Ether	net		Cloud Server Setting	
IP Address	192.168.163.150		Server mode	ADMS

15.2 Add Device on the Software

Add the device by searching. The process is as follows:

- 1. Click Access Control > Device > Search Device to open the Search interface in the software.
- 2. Click **Search**, and it will prompt "**Searching**.....".
- 3. After searching, the list and total number of access controllers will be displayed.

				Search Device				
Search	No device found?	Download Search	Tools to Local Disk					
Total Progress 100% Searched devices count:1								
IP Address		Device Type		Serial Number		\bigotimes		
IP Address	MAC Address	Subnet Mask	Gateway Address	Serial Number	Device Type	Set Server	Operations	
192.168.213.79		255.255.255.0	192.168.213.1	terro en verso	PerliptionX		Add	
The current system communication port is 6609, please make sure the device is set correctly. Close								

4. Click **Add** in operation column, a new window will pop-up. Select Icon type, Area, and Add to Level from each dropdown and click **OK** to add the device.

15.3 Add Personnel on the Software

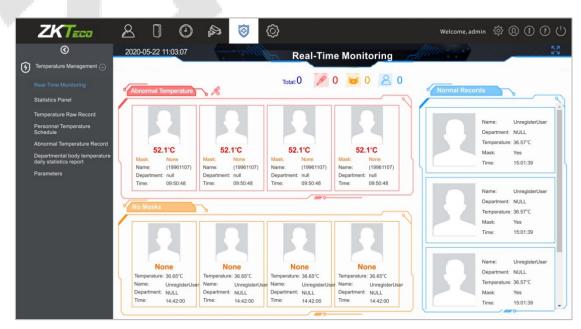

1. Click **Personnel** > **Person** > **New**:

			New			
Personnel ID*	2		Department*	Department Name	2	
First Name			Last Name			
Gender		-	Mobile Phone			
Certificate Type	ID	-	Certificate Number

🖉 General		Select All	Device Operation Role	Or	dinary Use	r 🖃
		Unselect All	Disabled			
			Set Valid Time			
		Save and	i New OK	Cancel		

- 2. Fill in all the required fields and click **OK** to register a new user.
- Click Access > Device > Device Control > Synchronize All Data to Devices to synchronize all the data to the device including the new users.

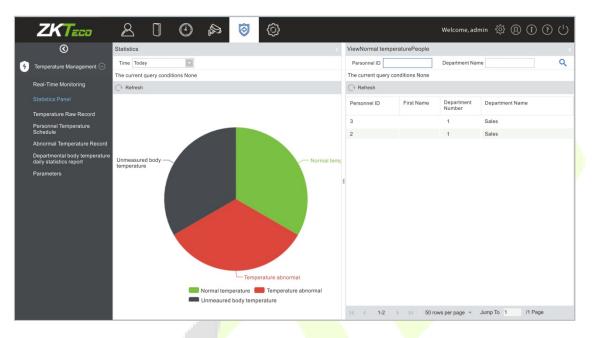

15.4 Real-time monitoring on the ZKBioAccess MTD Software

1. Click **Prevention** > **Epidemic** > **Temperature Detection** > **Real-time monitoring** to view all the personnel's events present under the Abnormal Temperature, No Masks, and Normal Records.

The user data of abnormal body temperature is displayed on the Abnormal Temperature information bar automatically according to the Temperature Threshold Setting is set.

2. Click Epidemic > Temperature Management > Statistics Panel to view the analysis of statistical data in the form of a pie-chart and view the personnel with normal temperature, abnormal temperature, and unmeasured body temperature. Also, detailed information of the personnel can be seen on the right by clicking on the particular category on the pie-chart.

Note: For other specific operations, please refer to ZKBioAccess MTD User Manual.

16 <u>Connecting to ZKBio Talk Software</u>

Download and install the ZKBio Talk software. Then, keep the parameter settings of ZKBioSecurity software unchanged for the relevant settings. (Please refer to <u>LAN Video Intercom Function Settings</u>).

Following are the steps to connect ZKBio Talk to the ZKBioSecurity software:

1. Firstly, change the parameter on the device.

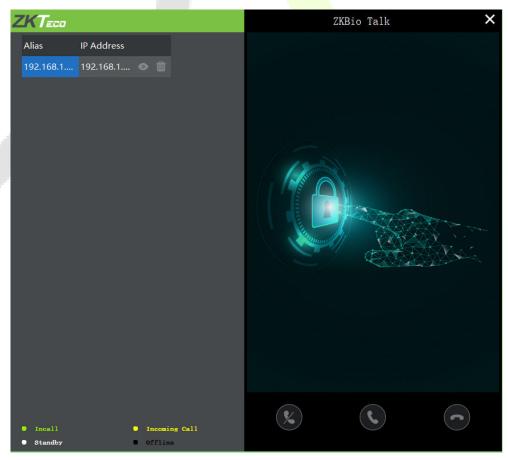

Tap on \blacksquare > System > Video intercom parameters > Intercom Server Setting on the device to change the server address and server port, as shown in the following figure.

5	Intercom Ser	ver Setting
Server Add	dress	192.168.163.61
Server por	t	25550

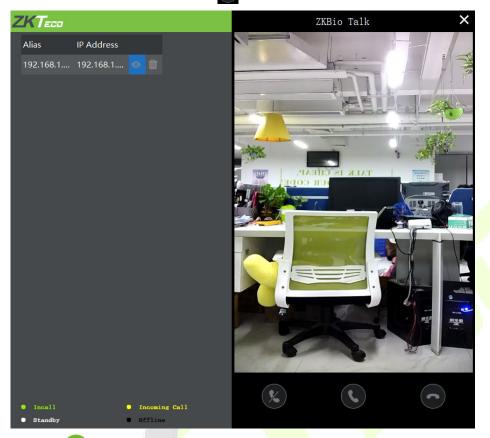

Server Address: Enter the current server installation IP address.

Server Port: The default server port is 25550.

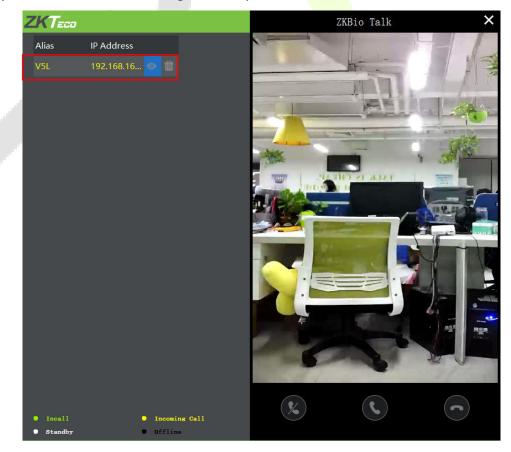

2. Double click the icon 🕡 to open the ZKBio Talk software. When the device-side video intercom parameters are set correctly, the device automatically pushes the device list on the left, as shown in following figure.

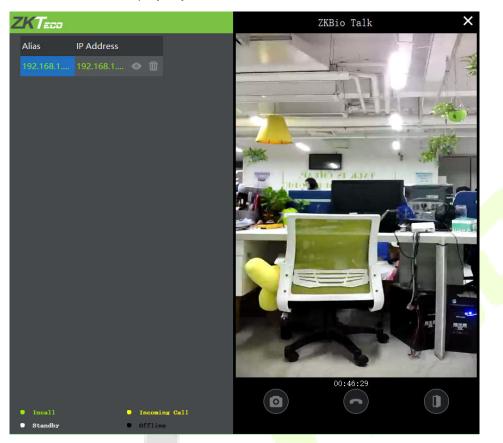

3. A user can click on so to preview the video on the right. On clicking so r con, a user can close the preview screen. No action is taken when so is clicked.

4. When a user clicks (1) icon on the main interface of the device to make a call, the software interface displays the IP address of the calling device in yellow.

5. When the user clicks the sicon to answer the call, the IP address is displayed in green while on the call. The call duration is also displayed just above the icon.

Function Description:

This is the Snapshot key, used to take a snapshot
This is the Remote open key, used to open the door remotely. The default lock drive time is 5 seconds

Note: Only the offline devices can be removed.

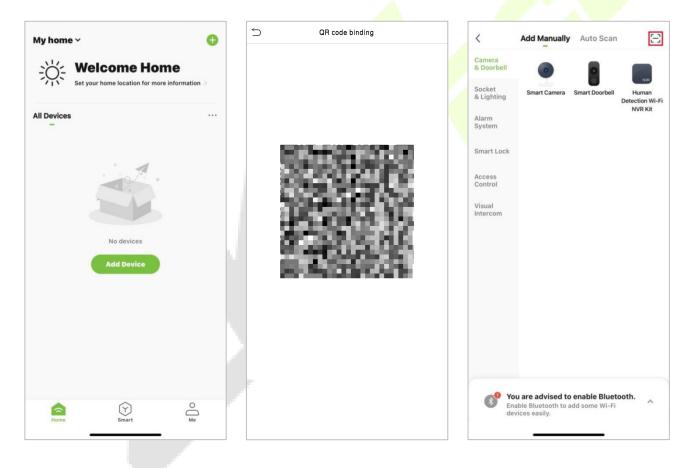

17 <u>Connecting to ZSmart APP★</u>

17.1 Adding Device on the ZSmart APP

After downloading and installing the ZSmart APP on your phone, create a User account initially with your

Email ID. After creating the User account, log in to the App, and click or the screen to add a device. The process is as follows:

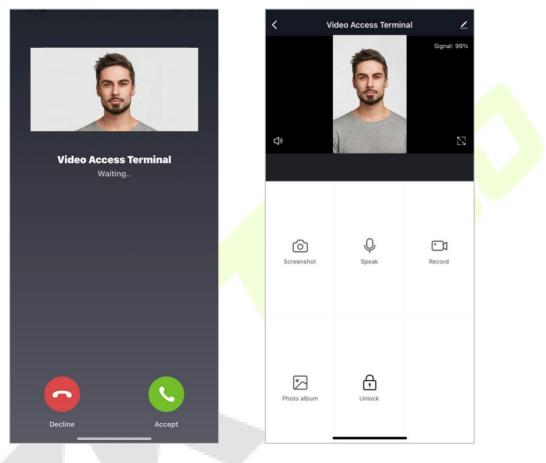

- 1. Click **Add Device** on the Home page.
- 2. Tap on System > Video Intercom Parameters > QR Code Binding to show the QR code of the device.
- 3. Click the \bigcirc icon in the upper right corner.

Scan	Cancel	Done
	Adding device Ensure that the device is powered on.	Added.
lign the QR code or barcode in the frame and scan it	01:56	
	Scan Register Initialize devices. on Cloud. the device.	

17.2 Video Phone Connection

Visitors press the button on the device to make a call and the phone will ring. The user can accept or decline the call. After the user accepts the call, it will open the video door phone interface. Enter the password to unlock the door.

Parameter	Description
Screenshot	Click to take a screenshot.
Speak	The icon becomes blue when click it, and you can talk to the device at this time.
Record	Click to make a record video.
Photo album	View and delete screenshots and recorded videos.
Unlock	Click to open the door remotely. The unlocking record is saved in Me > Message Center .

Note: For other specific operations, please refer to the ZSmartAPP User Manual.

18 Connecting to SIP★

Tap Video Intercom Parameters on the System interface to go to the monitoring parameter settings.

Note: This function needs to be used with the indoor station Vpad A2.

Function Name	Description
Calling Delay(s)	Set the time of call, valid value 30 to 60 seconds.
Talking Delay(s)	Set the time of intercom, valid value 60 to 120 seconds.
Calling Shortcut Settings	You can set a shortcut key to call the indoor station quickly without entering the IP address of the indoor unit each time.
dtmf	The value of WebServer is the same as the value of DMTF in the device in order to unlock it.
SIP Server	Select whether to enable the server address. Once you have connected to the server, you can call it by entering the username of the indoor station.
Server Address	Enter the server address.
Server Port	Enter the server port.
User Name	Enter the Username of server.
Password	Enter the password of server.
realm	Enter the realm of server.

The SpeedFace-V5L and the indoor station to achieve video intercom there are two modes, respectively, the LAN and SIP server.

18.1 Local Area Network Use

Set the IP address on the indoor station, Tap **Menu** > **Advanced** > **Network** > **1. Network** > **1. IPv4**.

	Network	~
Accounts	1. Connection Mode	Static IP
Network	2. IP Address	192.168.163.199
Security	3. Mask	255.255.255.0
Maintenance	4. Gateway	192.168.163.1
Device	5. Primary DNS	114.114.114
	6. Secondary DNS	8.8.8.8
		, ©

Note: In LAN, the IP addresses of the indoor station and the SpeedFace-V5L must be in the same network segment.

• Directly Enter the IP Address of the Indoor Station

Once the indoor station is configured with the network, the video intercom function can be realized by tap the $\hat{\Box}$ icon on the SpeedFace-V5L screen and entering the IP address of the indoor station in the jumping interface.

- Custom the Punch Status Options
- 1. Use your browser to enter the address to log into WebSever, the address is the <u>Serial IP</u> <u>Address:1443</u>, for example: <u>https://192.168.163.99:1443.</u>

19 Connecting to Bluetooth Lock 🖈

Through this Bluetooth function, the Bluetooth lock can be bound to the device, and when the user passes the verification on the device or enters the correct Bluetooth lock code, the lock can be unlocked remotely.

Tap **Bluetooth Settings** on the **Comm.** Settings interface to set the Bluetooth.

19.1 Bind Device

- Click **Bluetooth** to enable the Bluetooth function.
- You need to touch the Bluetooth lock keyboard to wake up the lock, the device will search through Bluetooth and display the Bluetooth lock to be bound on the **Bluetooth Settings** interface.

5 Bluet	cooth Settings
Bluetooth	
Shang lock 823A00	

- Select the Bluetooth lock to be bound, enter the lock password setting interface.
- Please enter a 6 to 9 digit new password, click **Confirm** to save the password, then the interface will display "Unbound" after completion.

5	Shang lock 823A00	5	Bluetooth Settings

19.5 Unlock

After the user binds the Bluetooth lock to the device, the lock can be unlocked through a password or remotely through the device.

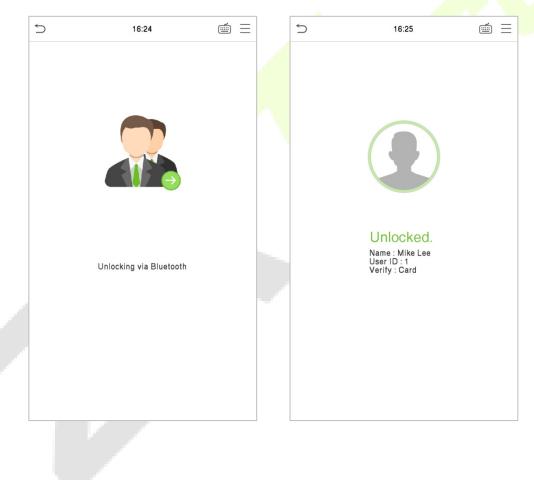

• Unlock via Password

After changing the password on the device, you can enter this password on the Bluetooth lock keyboard to unlock it.

Unlock via SpeedFace-V5L

After binding the Bluetooth lock to the device, the Bluetooth lock can be opened remotely when the user verifies that the face, card, fingerprint or password on the device.

After verification, the interface pops up an "**Unlocking via Bluetooth**" prompt, and the lock is opened after 5 seconds.

Appendix 1

Requirements of Live Collection and Registration of Visible Light Face

Images

- 1) It is recommended to perform registration in an indoor environment with an appropriate light source without underexposure or overexposure on the face.
- 2) Do not place the device towards outdoor light sources like door or window or other harsh light sources.
- 3) Dark-color apparels other than the background color are recommended for registration.
- 4) Expose your face and forehead properly and do not cover your face and eyebrows with your hair.
- 5) It is recommended to show a normal facial expression. (A smile is acceptable, but do not close your eyes, or incline your head to any orientation).
- 6) Two images are required for persons with eyeglasses, one image with eyeglasses and one other without them.
- 7) Do not wear accessories like scarf or mask that may cover your mouth or chin.
- 8) Please face right towards the capturing device and locate your face in the image capturing area as shown in the image below.
- 9) Do not include more than one face in the capturing area.
- 10) A distance of 50cm to 80cm is recommended for capturing the image. (the distance is adjustable, subject to body height).

Requirements for Visible Light Digital Face Image Data

The digital photo should be straight-edged, coloured, half-portrayed with only one person, and the person should be uncharted and in casuals. Persons who wear eyeglasses should remain to put on eyeglasses for getting photos captured.

Eye Distance

200 pixels or above are recommended with no less than 115 pixels of distance.

Facial Expression

A neutral face or smile with eyes naturally open are recommended.

Gesture and Angel

The horizontal rotating angle should not exceed $\pm 10^{\circ}$, elevation should not exceed $\pm 10^{\circ}$, and depression angle should not exceed $\pm 10^{\circ}$.

Accessories

Masks or coloured eyeglasses are not allowed. The frame of the eyeglasses should not cover the eyes and should not reflect light. For persons with thick eyeglasses frames, it is recommended to capture two images, one with eyeglasses and the other one without them.

Face

Complete face with clear contour, real scale, evenly distributed light, and no shadow.

Image Format

Should be in BMP, JPG or JPEG.

Data Requirement

Should comply with the following requirements:

- 1) White background with dark-coloured apparel.
- 2) 24bit true color mode.
- 3) JPG format compressed image with not more than 20kb size.
- 4) Resolution should be between 358 x 441 to 1080 x 1920.
- 5) The vertical scale of head and body should be in a ratio of 2:1.
- 6) The photo should include the captured person's shoulders at the same horizontal level.
- 7) The captured person's eyes should be open and with clearly seen iris.
- 8) A neutral face or smile is preferred, showing teeth is not preferred.
- 9) The captured person should be easily visible, natural in color, no harsh shadow or light spot or reflection in the face or background. The contrast and lightness level should be appropriate.

Appendix 2

Privacy Policy

Notice:

To help you better use the products and services of ZKTeco and its affiliates, hereinafter referred as "we", "our", or "us", the smart service provider, we consistently collect your personal information. Since we understand the importance of your personal information, we took your privacy sincerely and we have formulated this privacy policy to protect your personal information. We have listed the privacy policies below to precisely understand the data and privacy protection measures related to our smart products and services.

Before using our products and services, please read carefully and understand all the rules and provisions of this Privacy Policy. <u>If you do not agree to the relevant agreement or any of its</u> terms, you must stop using our products and services.

I. Collected Information

To ensure the normal product operation and help the service improvement, we will collect the information voluntarily provided by you or provided as authorized by you during registration and use or generated as a result of your use of services.

- 1. User Registration Information: At your first registration, the feature template (Fingerprint template/Face template/Palm template) will be saved on the device according to the device type you have selected to verify the unique similarity between you and the User ID you have registered. You can optionally enter your Name and Code. The above information is necessary for you to use our products. If you do not provide such information, you cannot use some features of the product regularly.
- 2. **Product information:** According to the product model and your granted permission when you install and use our services, the related information of the product on which our services are used will be collected when the product is connected to the software, including the Product Model, Firmware Version Number, Product Serial Number, and Product Capacity Information. When you connect your product to the software, please carefully read the privacy policy for the specific software.

II. Product Security and Management

1. When you use our products for the first time, you shall set the Administrator privilege before performing specific operations. Otherwise, you will be frequently reminded to set the Administrator privilege when you enter the main menu interface. **If you still do not set the Administrator privilege after receiving the system prompt, you should be aware of the possible security risk (for example, the data may be manually modified).**

- 2. All the functions of displaying the biometric information are disabled in our products by default. You can choose Menu > System Settings to set whether to display the biometric information. If you enable these functions, we assume that you are aware of the personal privacy security risks specified in the privacy policy.
- 3. Only your user ID is displayed by default. You can set whether to display other user verification information (such as Name, Department, Photo, etc.) under the Administrator privilege. If you choose to display such information, we assume that you are aware of the potential security risks (for example, your photo will be displayed on the device interface).
- 4. The camera function is disabled in our products by default. If you want to enable this function to take pictures of yourself for attendance recording or take pictures of strangers for access control, the product will enable the prompt tone of the camera. **Once you enable this function, we assume that you are aware of the potential security risks.**
- 5. All the data collected by our products is encrypted using the AES 256 algorithm. All the data uploaded by the Administrator to our products are automatically encrypted using the AES 256 algorithm and stored securely. If the Administrator downloads data from our products, we assume that you need to process the data and you have known the potential security risk. In such a case, you shall take the responsibility for storing the data. You shall know that some data cannot be downloaded for sake of data security.
- 6. All the personal information in our products can be queried, modified, or deleted. If you no longer use our products, please clear your personal data.

III. How we handle personal information of minors

Our products, website and services are mainly designed for adults. Without consent of parents or guardians, minors shall not create their own account. If you are a minor, it is recommended that you ask your parents or guardian to read this Policy carefully, and only use our services or information provided by us with consent of your parents or guardian.

We will only use or disclose personal information of minors collected with their parents' or guardians' consent if and to the extent that such use or disclosure is permitted by law or we have obtained their parents' or guardians' explicit consent, and such use or disclosure is for the purpose of protecting minors.

Upon noticing that we have collected personal information of minors without the prior consent from verifiable parents, we will delete such information as soon as possible.

IV. Others

You can visit <u>https://www.zkteco.com/cn/index/Index/privacy_protection.html</u> to learn more about how we collect, use, and securely store your personal information. To keep pace with the rapid development of technology, adjustment of business operations, and to cope with customer needs, we will constantly deliberate and optimize our privacy protection measures and policies. Welcome to visit our official website at any time to learn our latest privacy policy.

Eco-friendly Operation

The product's "eco-friendly operational period" refers to the time during which this product will not discharge any toxic or hazardous substances when used in accordance with the prerequisites in this manual.

The eco-friendly operational period specified for this product does not include batteries or other components that are easily worn down and must be periodically replaced. The battery's eco-friendly operational period is 5 years.

					•	
Component Name	Hazardous/Toxic Substance/Element
